

FEEDING 10 BILLION PEOPLE ON A WARMING PLANET

PAUL C WEST
@COOLFIREECOLOGY

CAMBIOSCOPE MEETING, TOULOUSE, FRANCE, NOVEMBER 2019

INSTITUTE ON THE
ENVIRONMENT

UNIVERSITY OF MINNESOTA
Driven to DiscoverSM

MEET THE NEEDS OF TODAY'S 7 BILLION

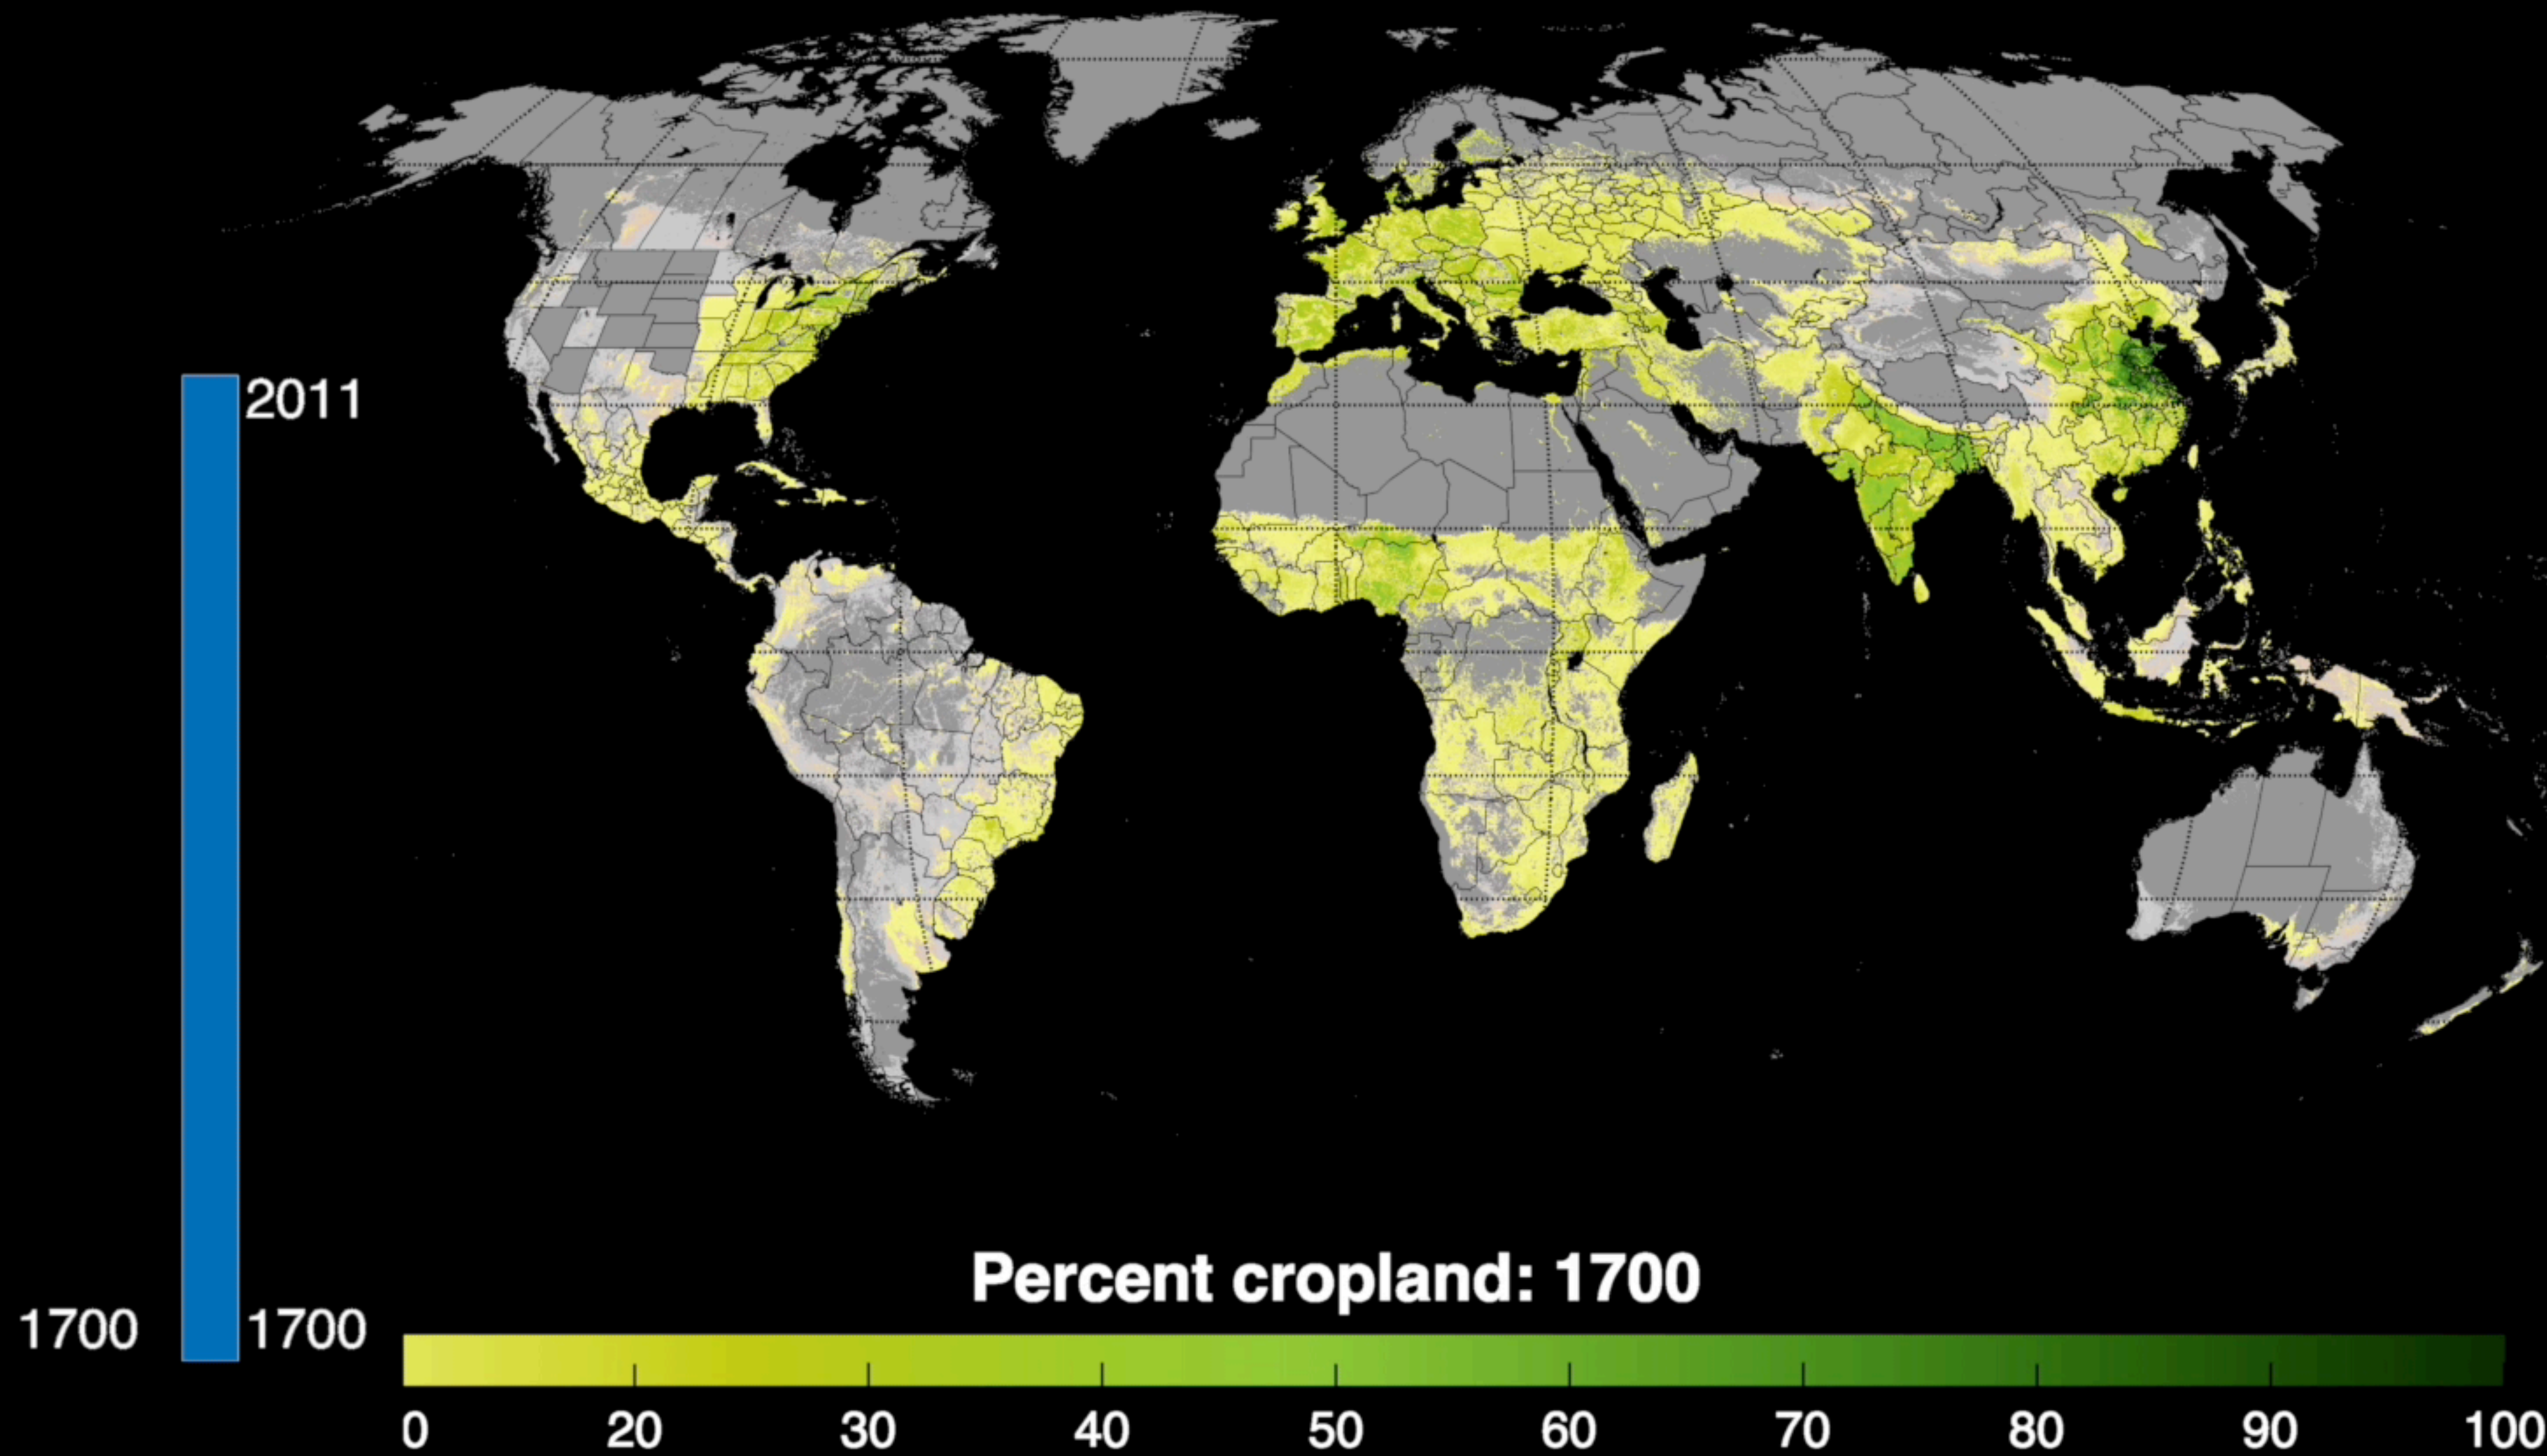

MEET THE NEEDS OF THE FUTURE 10 BILLION

...THAT EAT MORE MEAT

GROW FOOD SUSTAINABLY

ALL WITHIN A CHANGING CLIMATE....

570 MILLION

EATING IN AN INTERCONNECTED WORLD

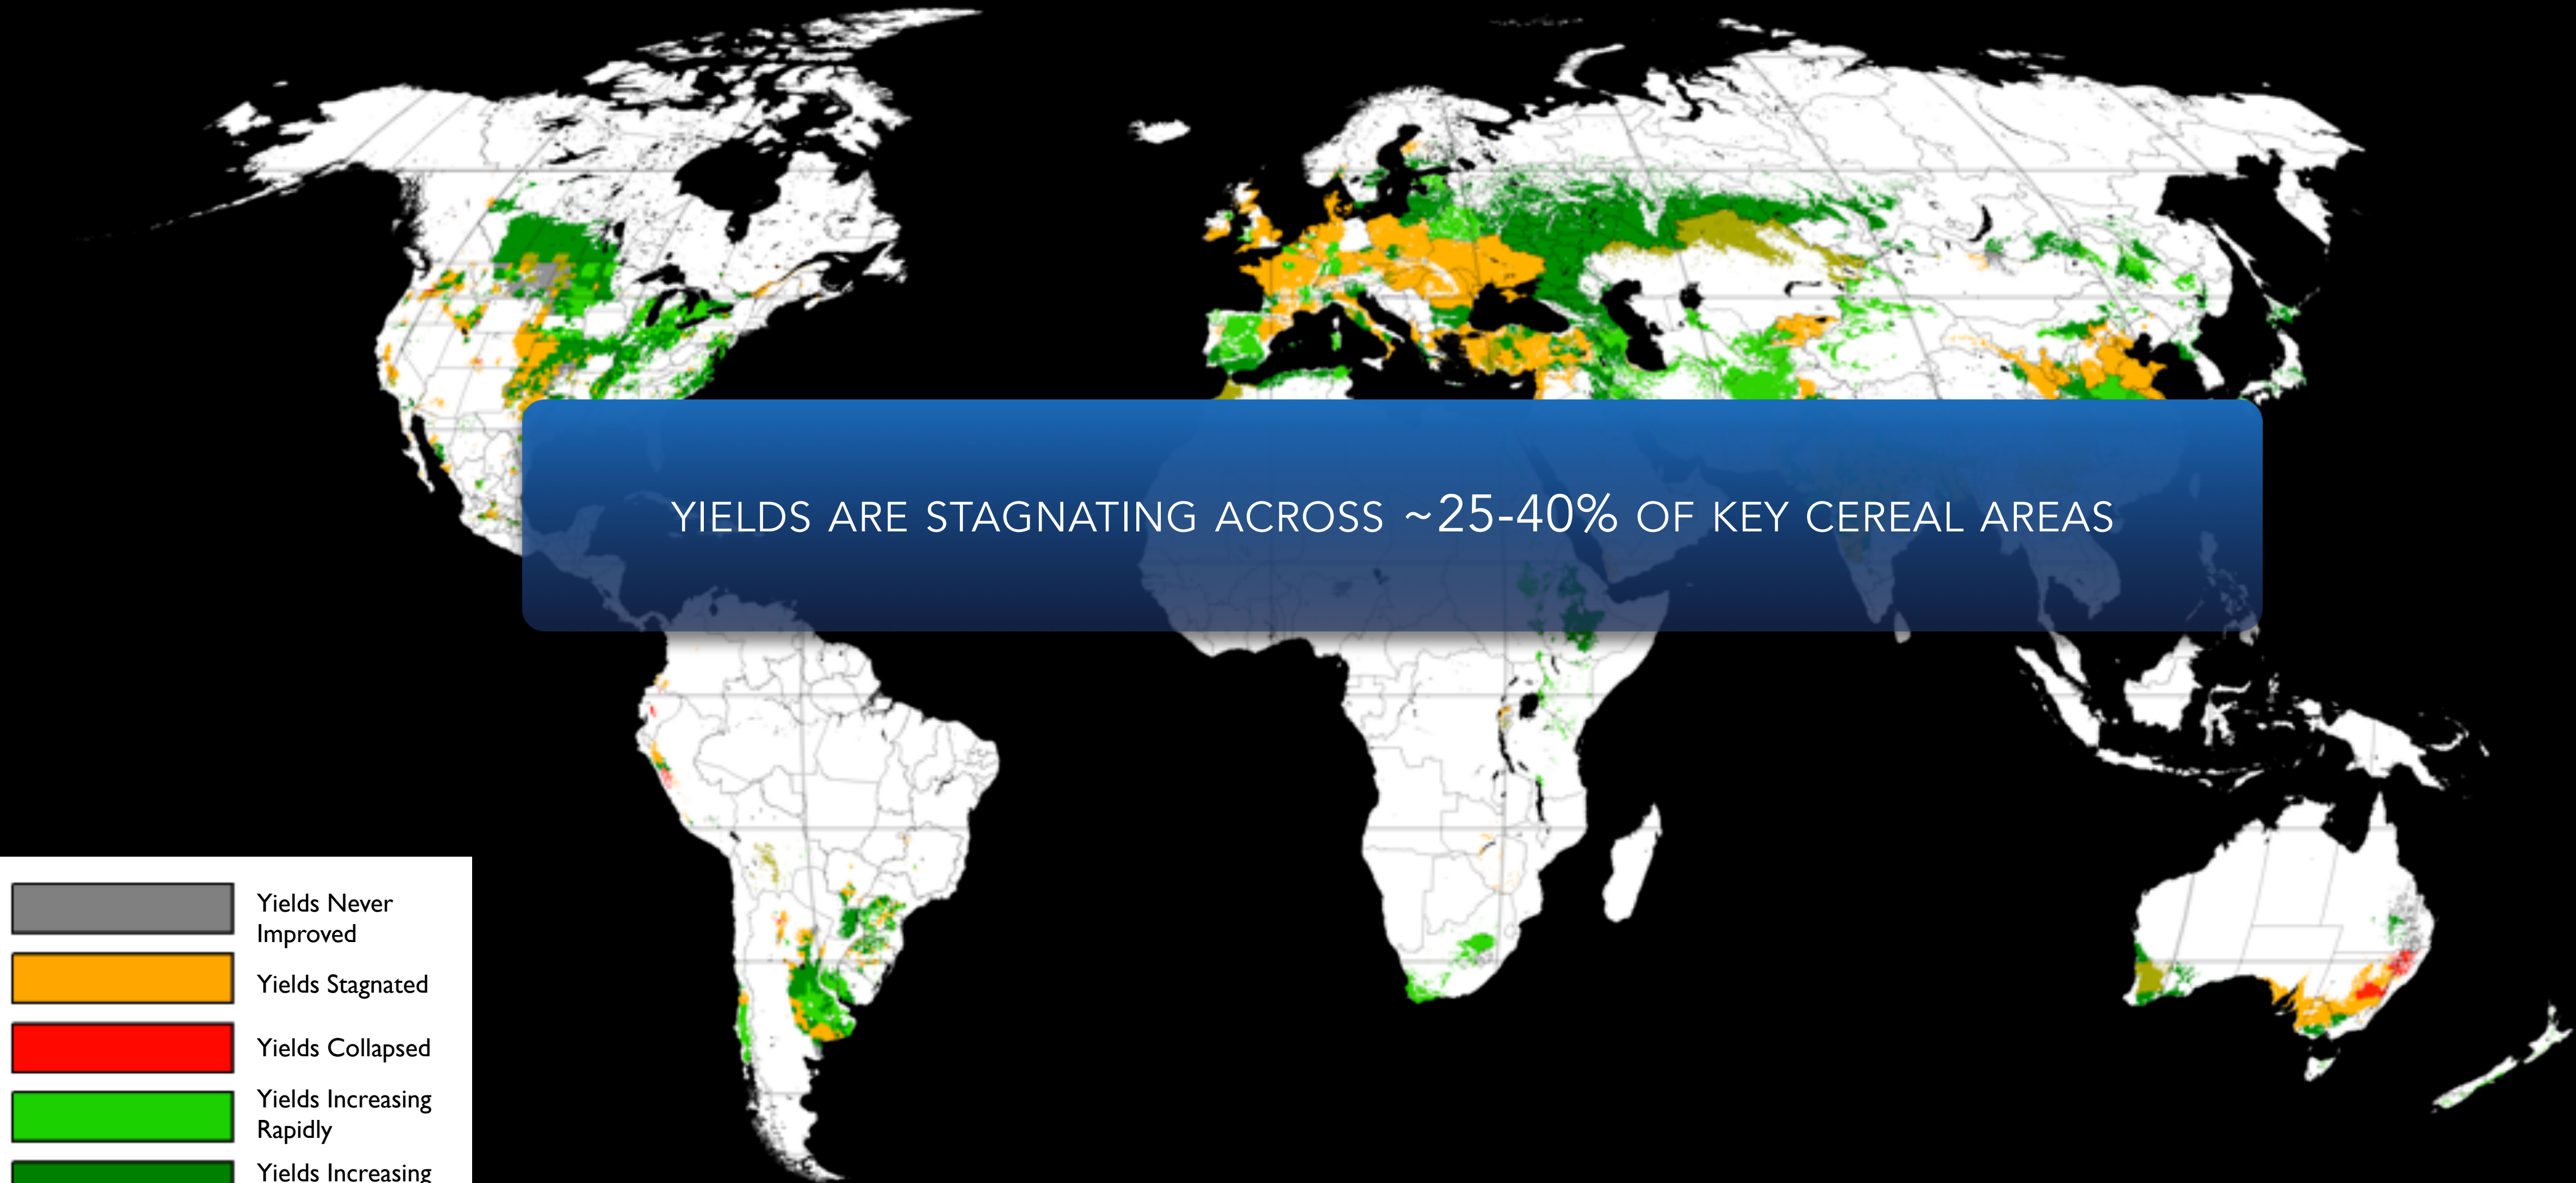

20+% OF GLOBAL CALORIE PRODUCTION IS TRADED
WHEAT, SOY, AND MAIZE = 50% CALORIES TRADED

indicates source country

1. GROW MORE FOOD ON CURRENT CROPLANDS

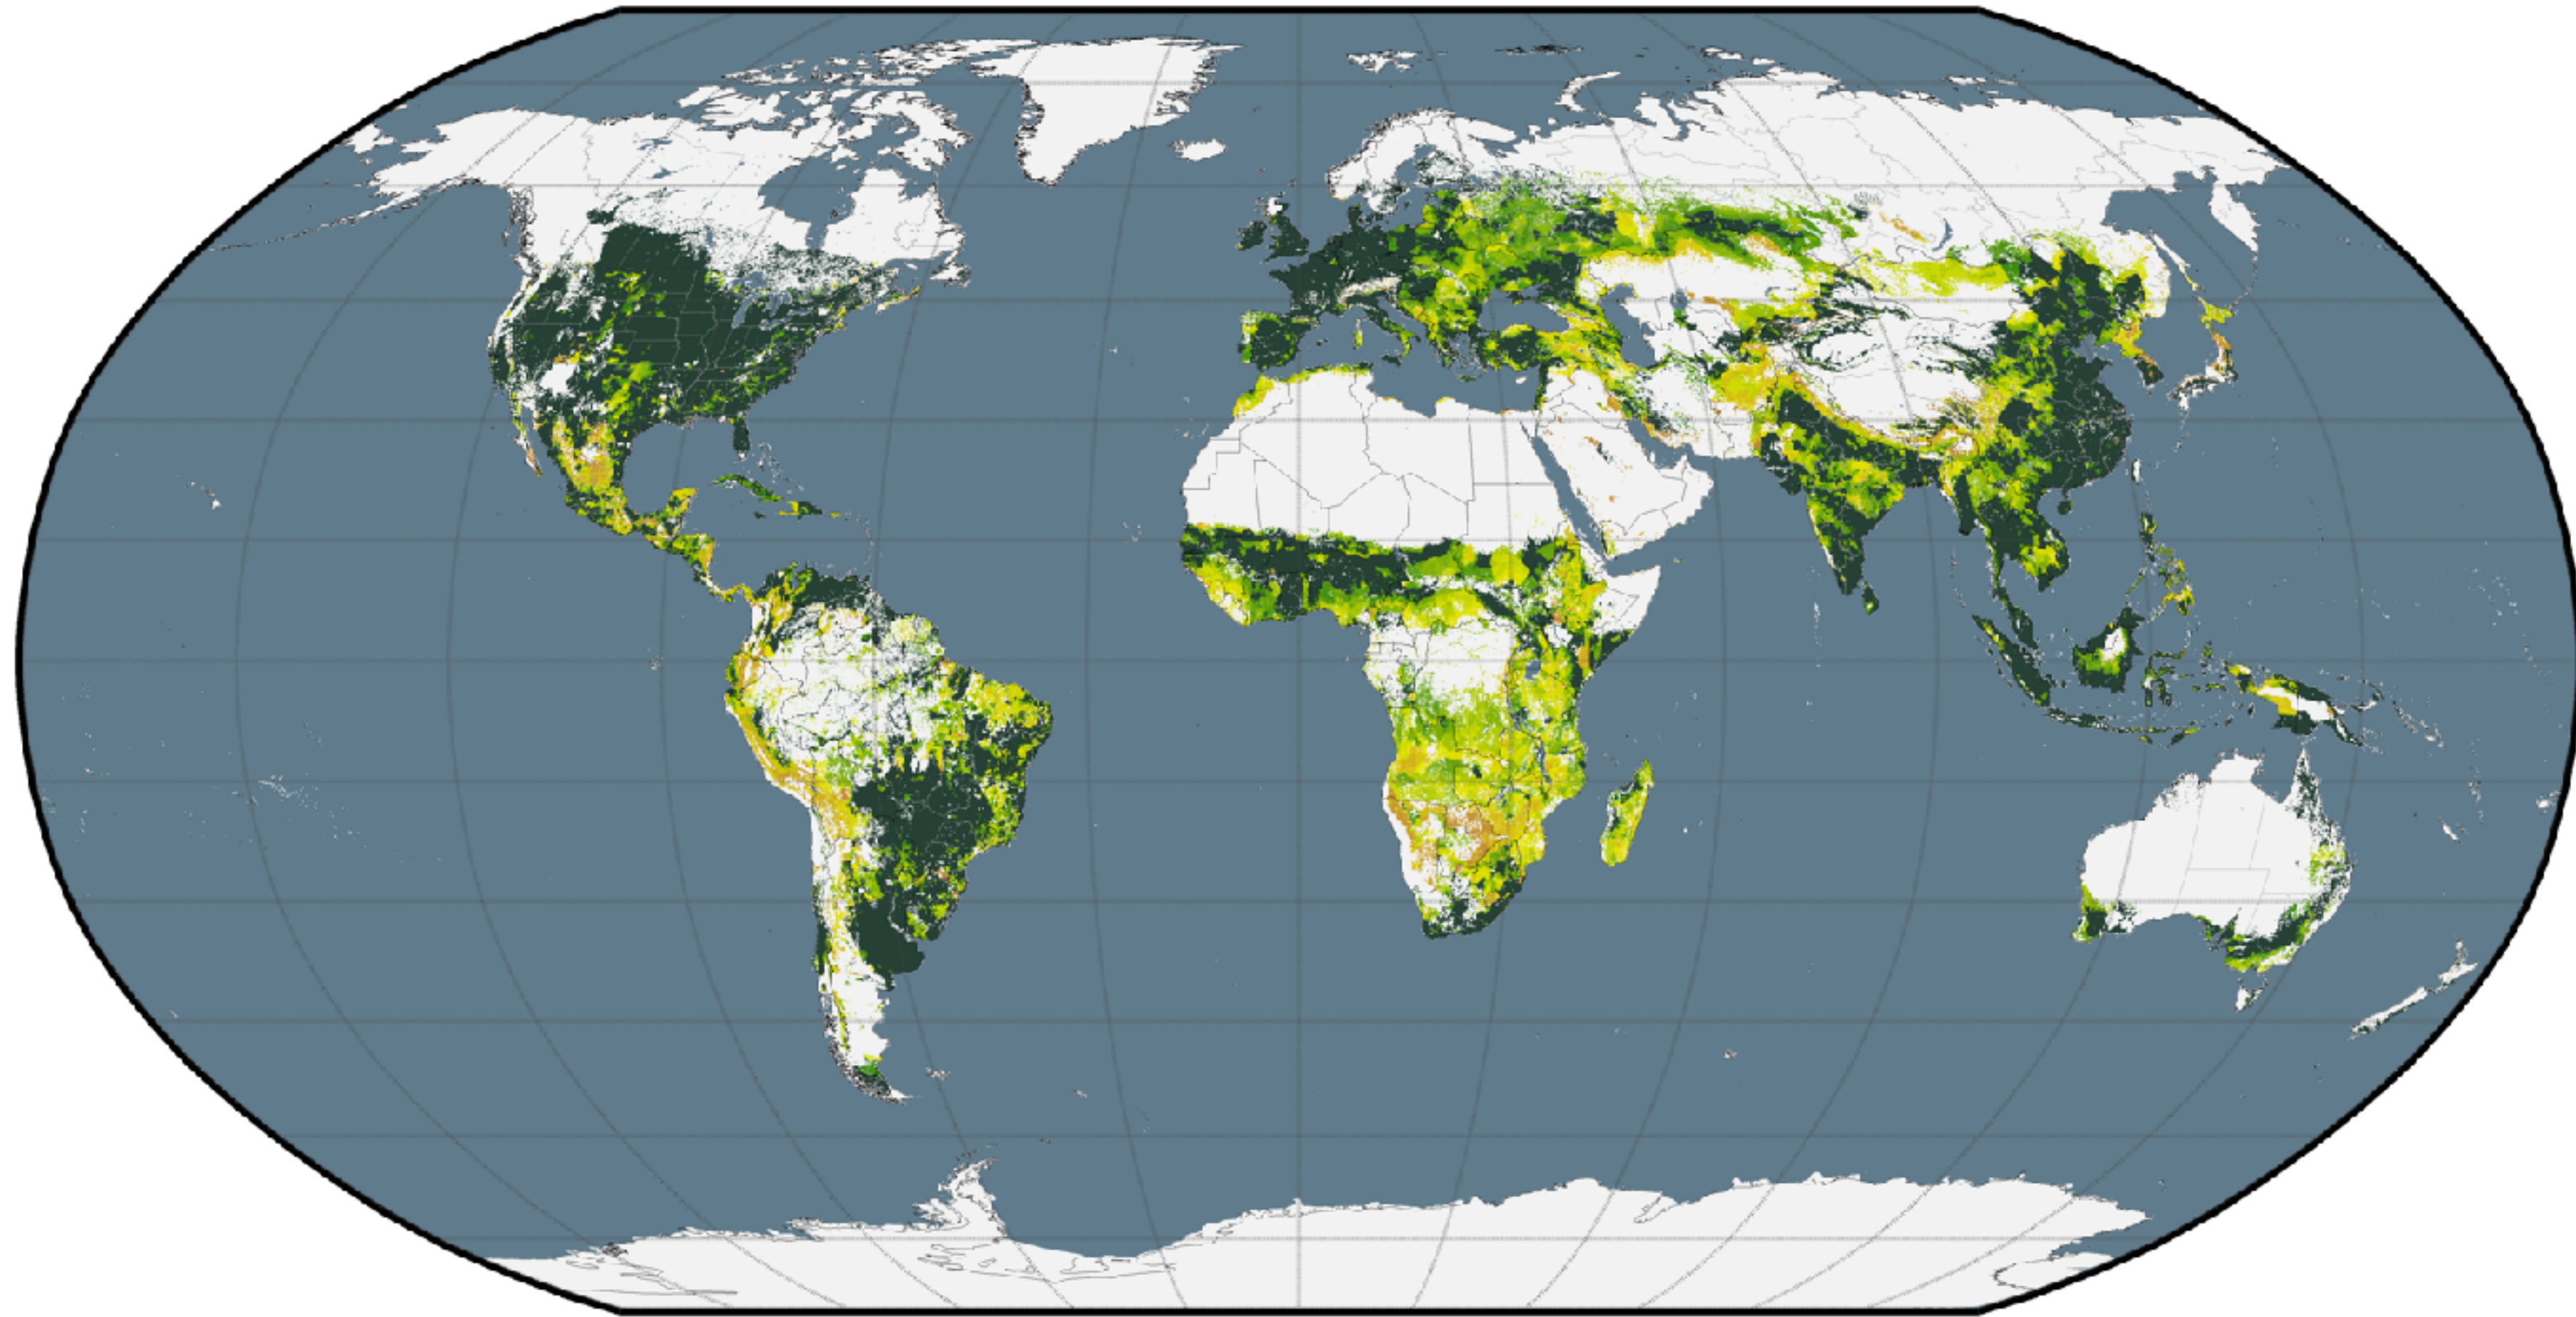

WHEAT YIELD TRENDS

YIELDS ARE STAGNATING ACROSS ~25-40% OF KEY CEREAL AREAS

INTENSIFYING FOOD PRODUCTION

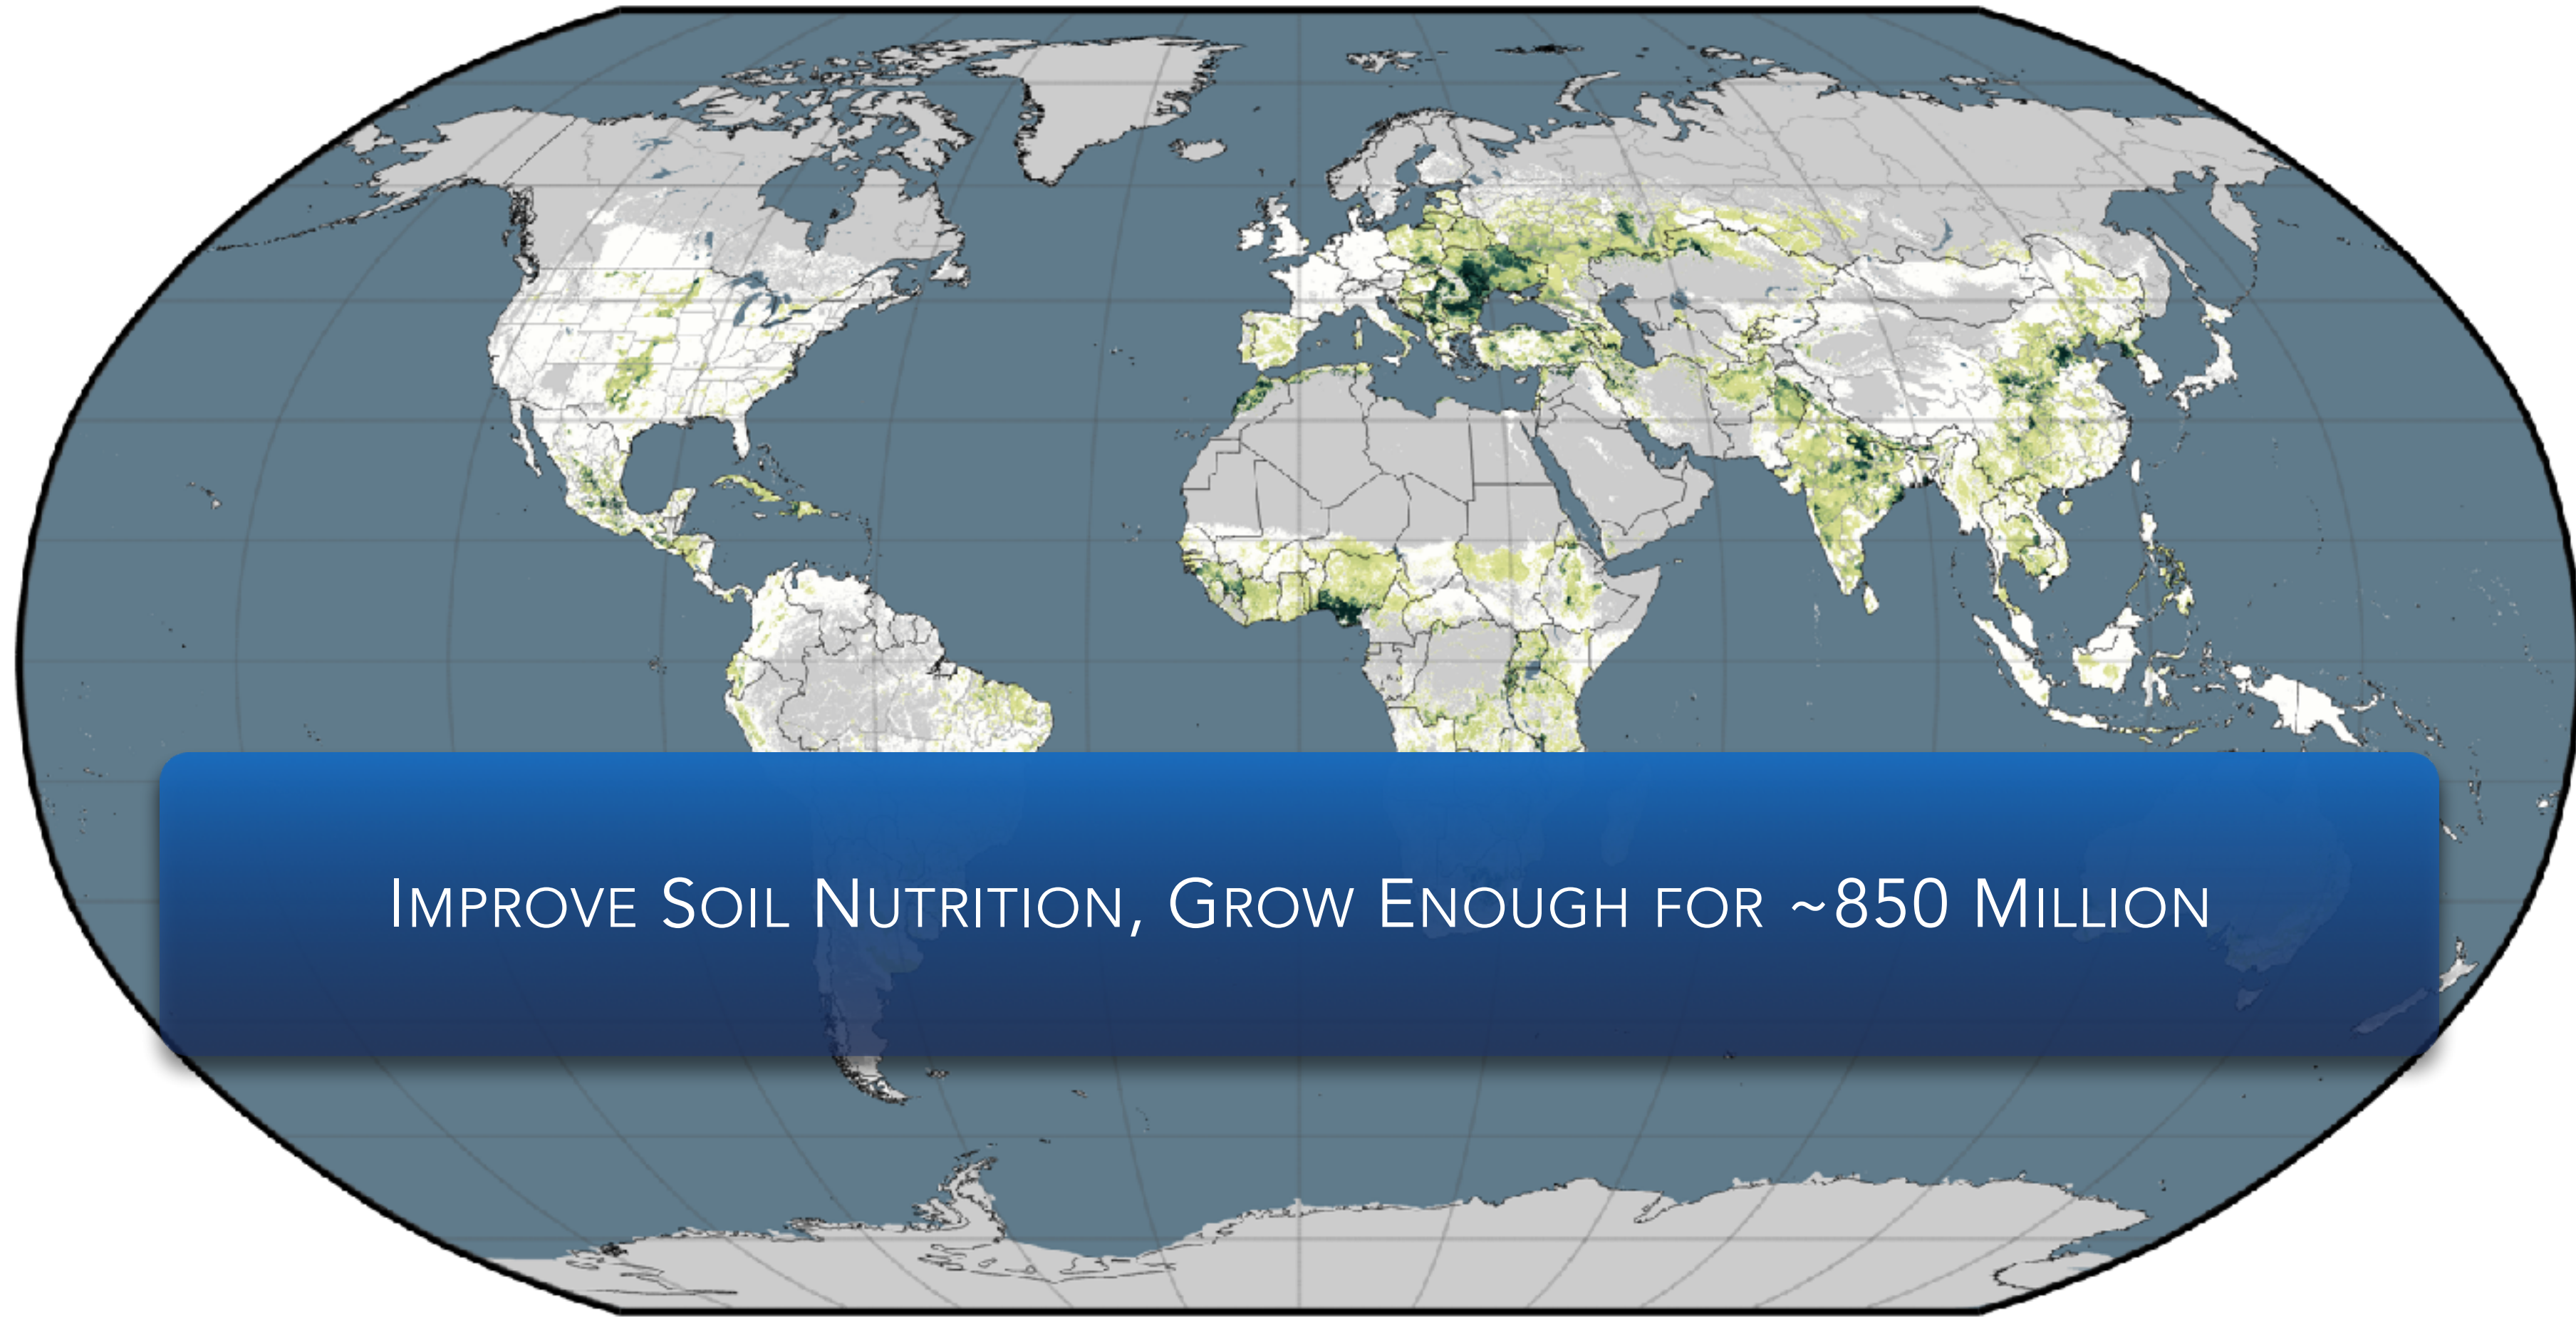

Percent of potential yield attainment - 17 major crops

SOURCE: WEST ET AL. 2014, SCIENCE

INTENSIFYING FOOD PRODUCTION

IMPROVE SOIL NUTRITION, GROW ENOUGH FOR ~850 MILLION

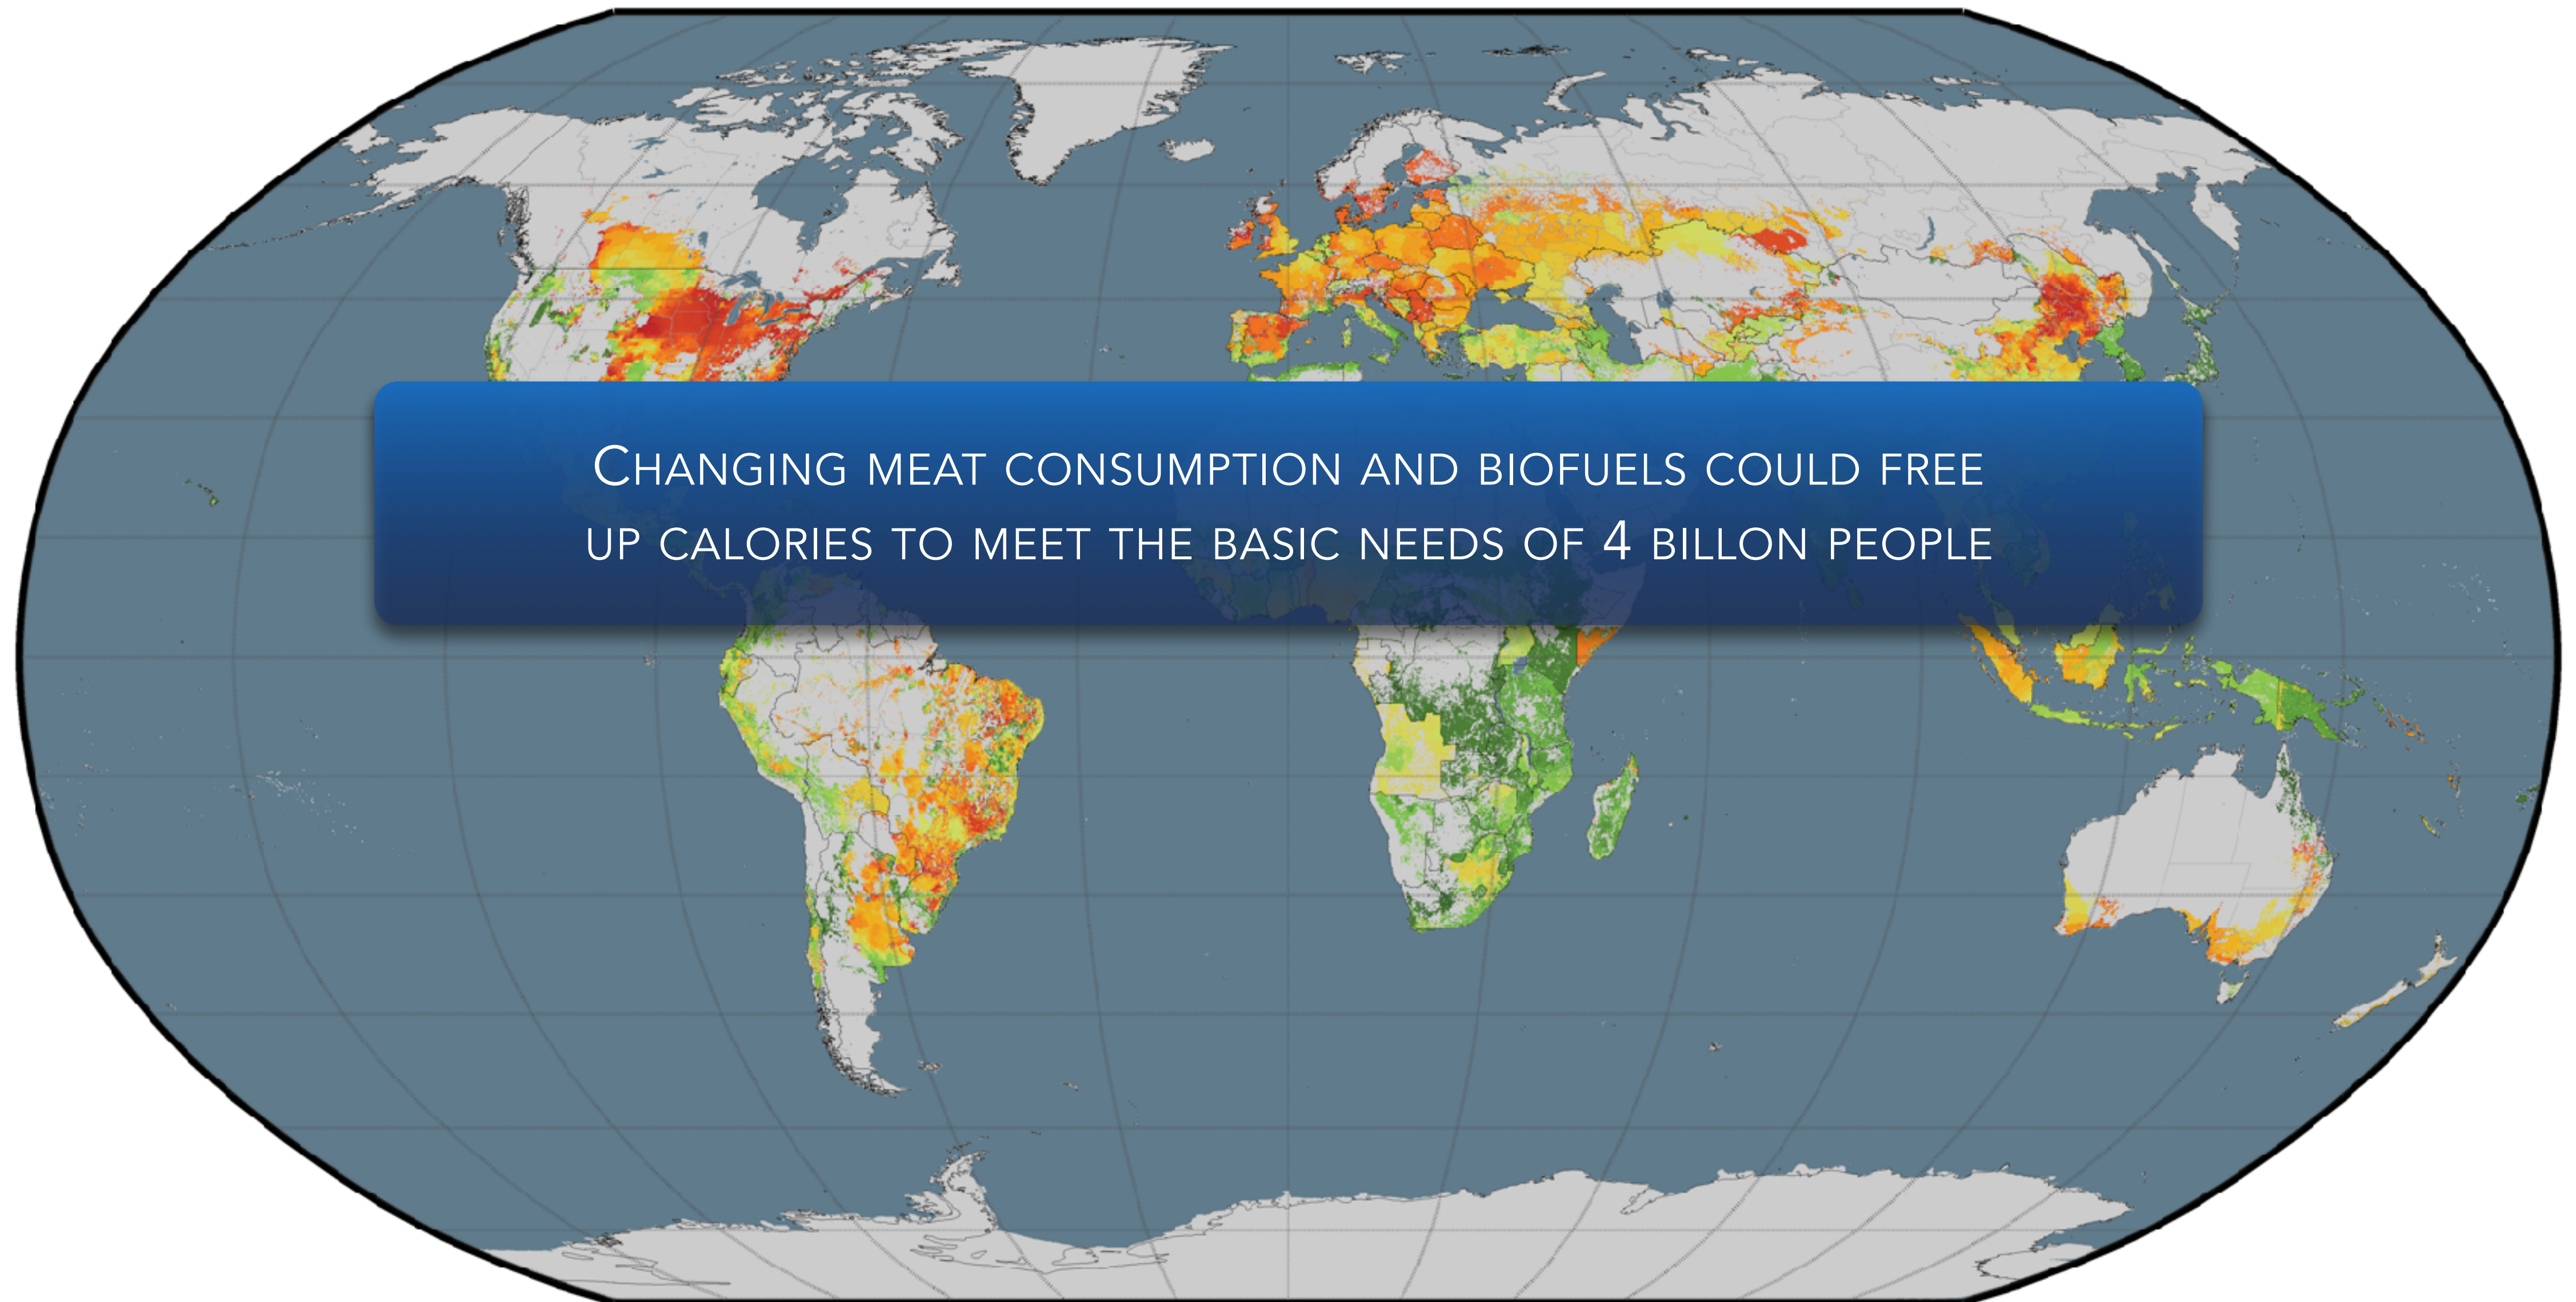

million kilocalories / hectare / year

2. USE WHAT WE GROW
MORE EFFICIENTLY

Calorie Delivery Fraction

CHANGING MEAT CONSUMPTION AND BIOFUELS COULD FREE UP CALORIES TO MEET THE BASIC NEEDS OF 4 BILLION PEOPLE

FOOD LOSS AND WASTE

NOT ALL WASTE IS EQUAL

Table 1. Calories lost to consumer food waste and associated land requirements for key food commodities in the United States, India, and China.

Food	Calorie supply (29) (kcal per capita day ⁻¹)	Consumer food waste (31) (% and kcal per capita day ⁻¹)	Embodied feed in calorie waste (kcal per capita day ⁻¹)	Harvested area required to support waste (m ² per capita year ⁻¹)
United States	3688*			
Wheat and rice	693	27% (187)	–	65
Vegetables	76	28% (21)	–	8
Beef	110	10% (11)	230	43
Pork	132	10% (13)	130	21
Poultry	193	10% (19)	199	31
China	3036†			
Wheat and rice	1380	20% (276)	–	59
Vegetables	205	15% (31)	–	10
Beef	27	8% (2)	33	9
Pork	355	8% (28)	178	47
Poultry	59	8% (5)	30	8
India	2321‡			
Wheat and rice	1168	3% (35)	–	14
Vegetables	46	7% (3)	–	3
Beef	5	4% (<1)	3	2
Pork	3	4% (<1)	1	1

IN THE USA, WASTING 1KG OF BEEF REQUIRES 5X MORE LAND THAN WASTING 1KG OF WHEAT

3. GROW FOOD MORE EFFICIENTLY

WATER

WATER CONSUMPTION

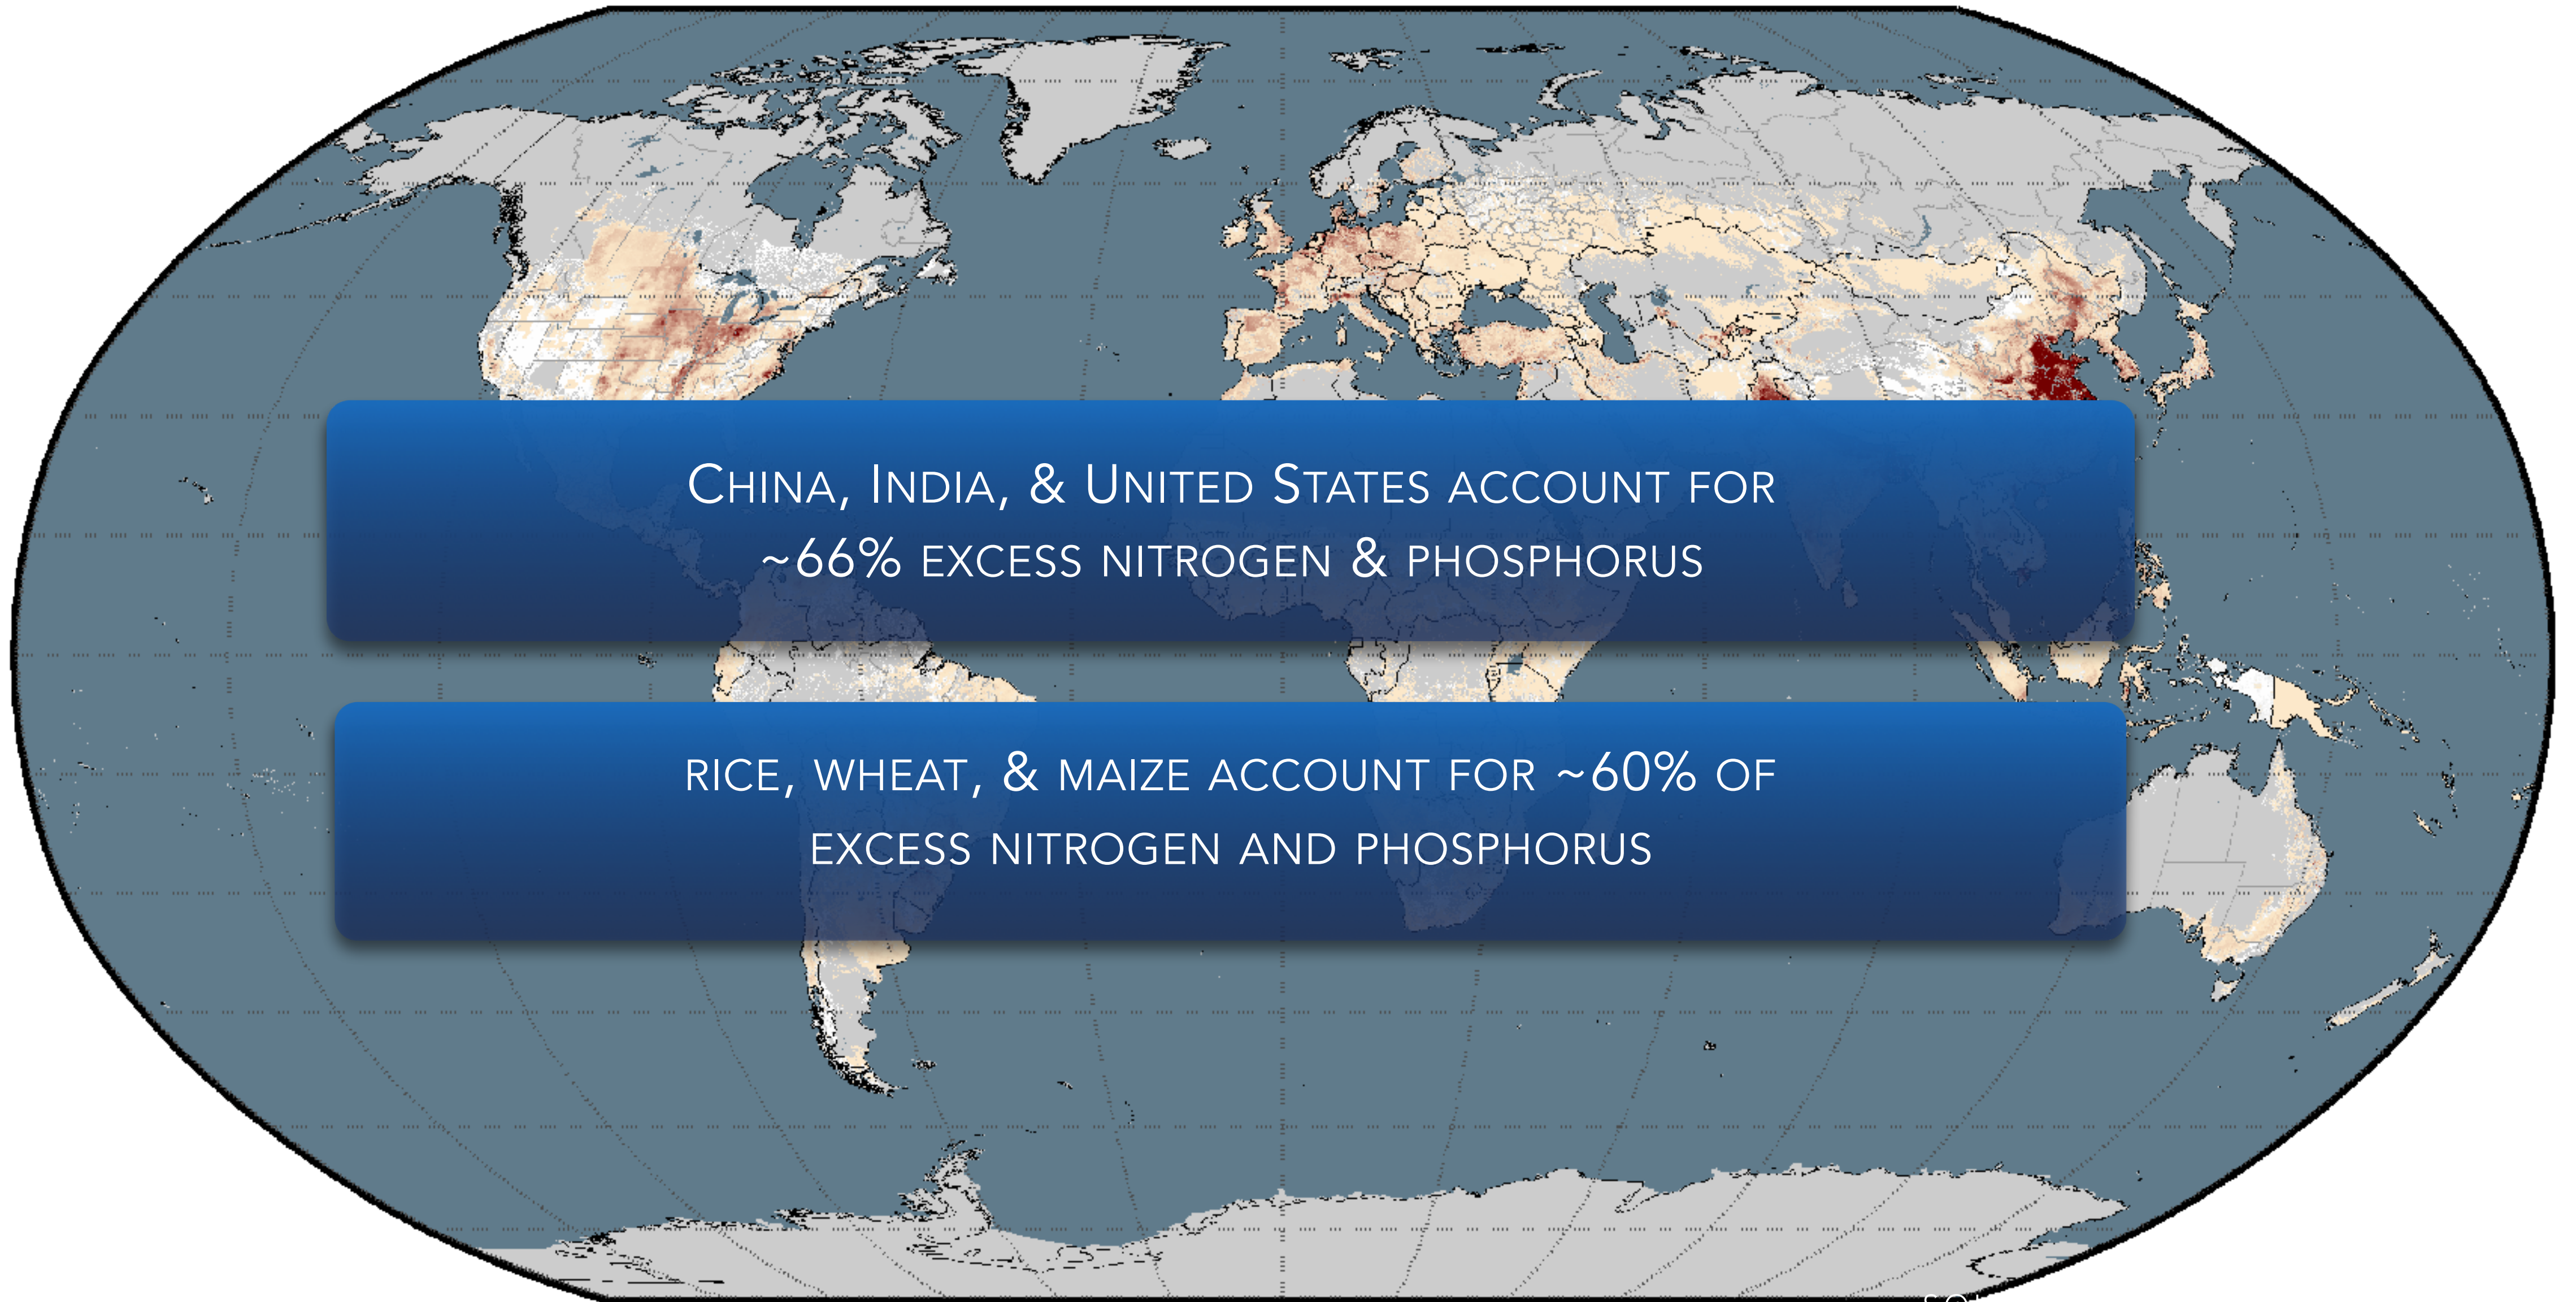

A world map with a grid overlay, showing irrigation water use. The map is color-coded, with the highest concentrations of water use shown in shades of blue and cyan, primarily in East Asia (China), South Asia (India), and parts of Southeast Asia and the United States. The rest of the world is shown in lighter shades of blue and grey.

CHINA, INDIA, PAKISTAN & UNITED STATES ACCOUNT FOR
72% IRRIGATION WATER USE...

59% OF IRRIGATION USED FOR RICE & WHEAT...
+ MAIZE, COTTON, AND SUGARCANE = 89%

WATER QUALITY

WATER QUALITY

CHINA, INDIA, & UNITED STATES ACCOUNT FOR
~66% EXCESS NITROGEN & PHOSPHORUS

RICE, WHEAT, & MAIZE ACCOUNT FOR ~60% OF
EXCESS NITROGEN AND PHOSPHORUS

MEETING THE 2C TARGET

1. REDUCE ENERGY & INDUSTRY EMISSIONS BY HALF, EACH DECADE

2. REDUCE AGRICULTURE & DEFORESTATION EMISSIONS TO ZERO BY 2050

3. REMOVE 5GT CO₂ EACH YEAR THROUGH NEGATIVE EMISSIONS TECHNOLOGY BY 2050

AGRICULTURE = 20-30% GLOBAL GHGs

DEFORESTATION HAS BEEN THE MAIN DRIVER,
BUT MANAGEMENT NOW SIMILAR

1992

2008

PHOTO: NASA

- Agricultural management
- Deforestation and other land use

METHANE

PHOTO: RYAN THOMPSON
CREATIVE COMMONS v2.0, 2008

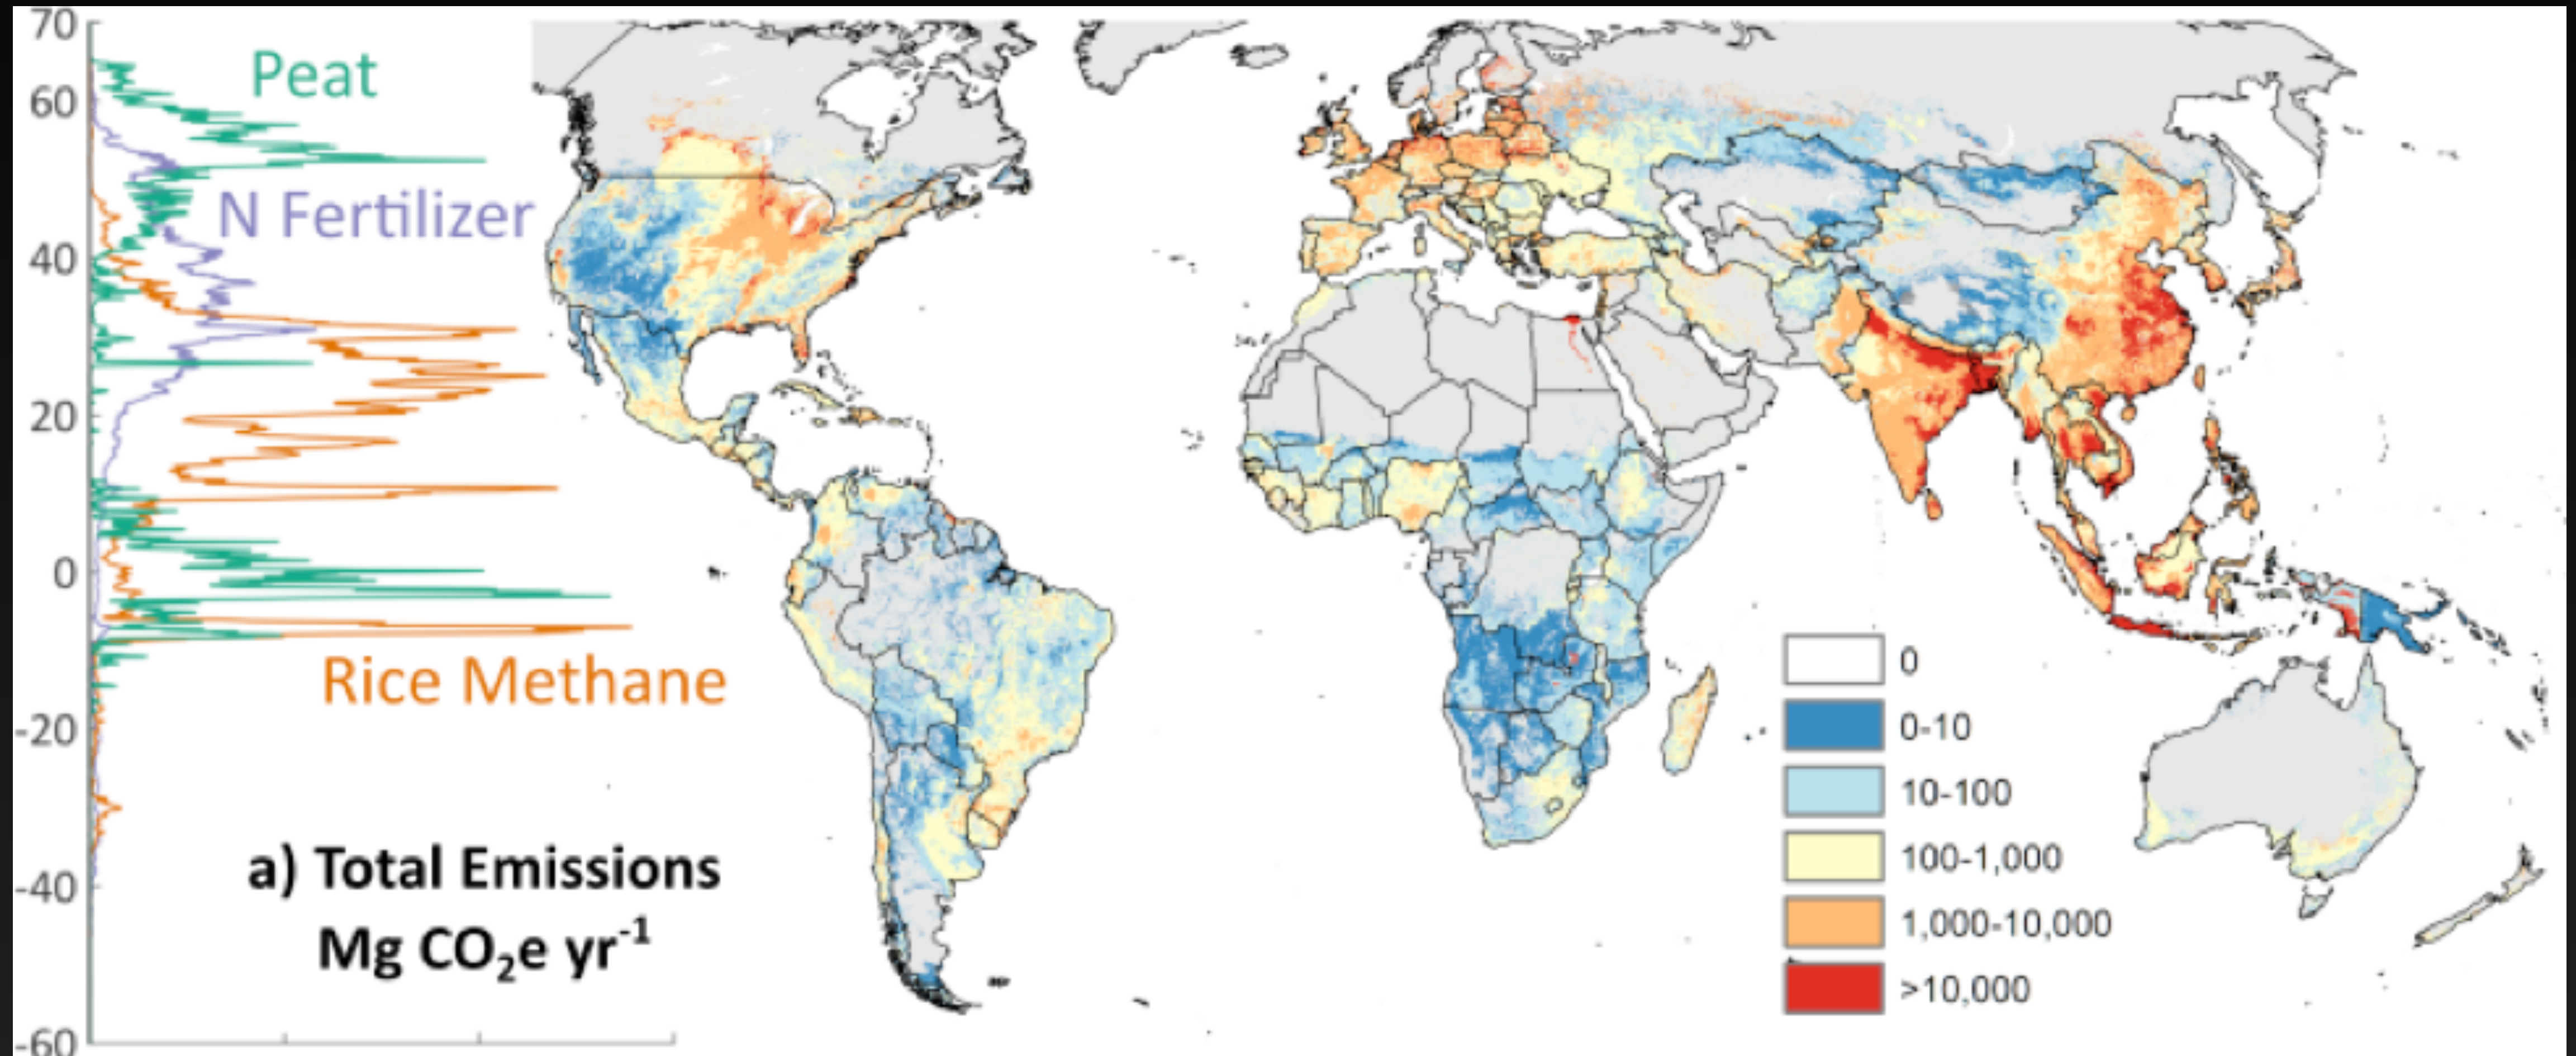

GLOBAL EMISSIONS

1945 ± 720 Tg CO₂e yr⁻¹

50% Rice Methane

29% Peatlands

21% N Fertilizer

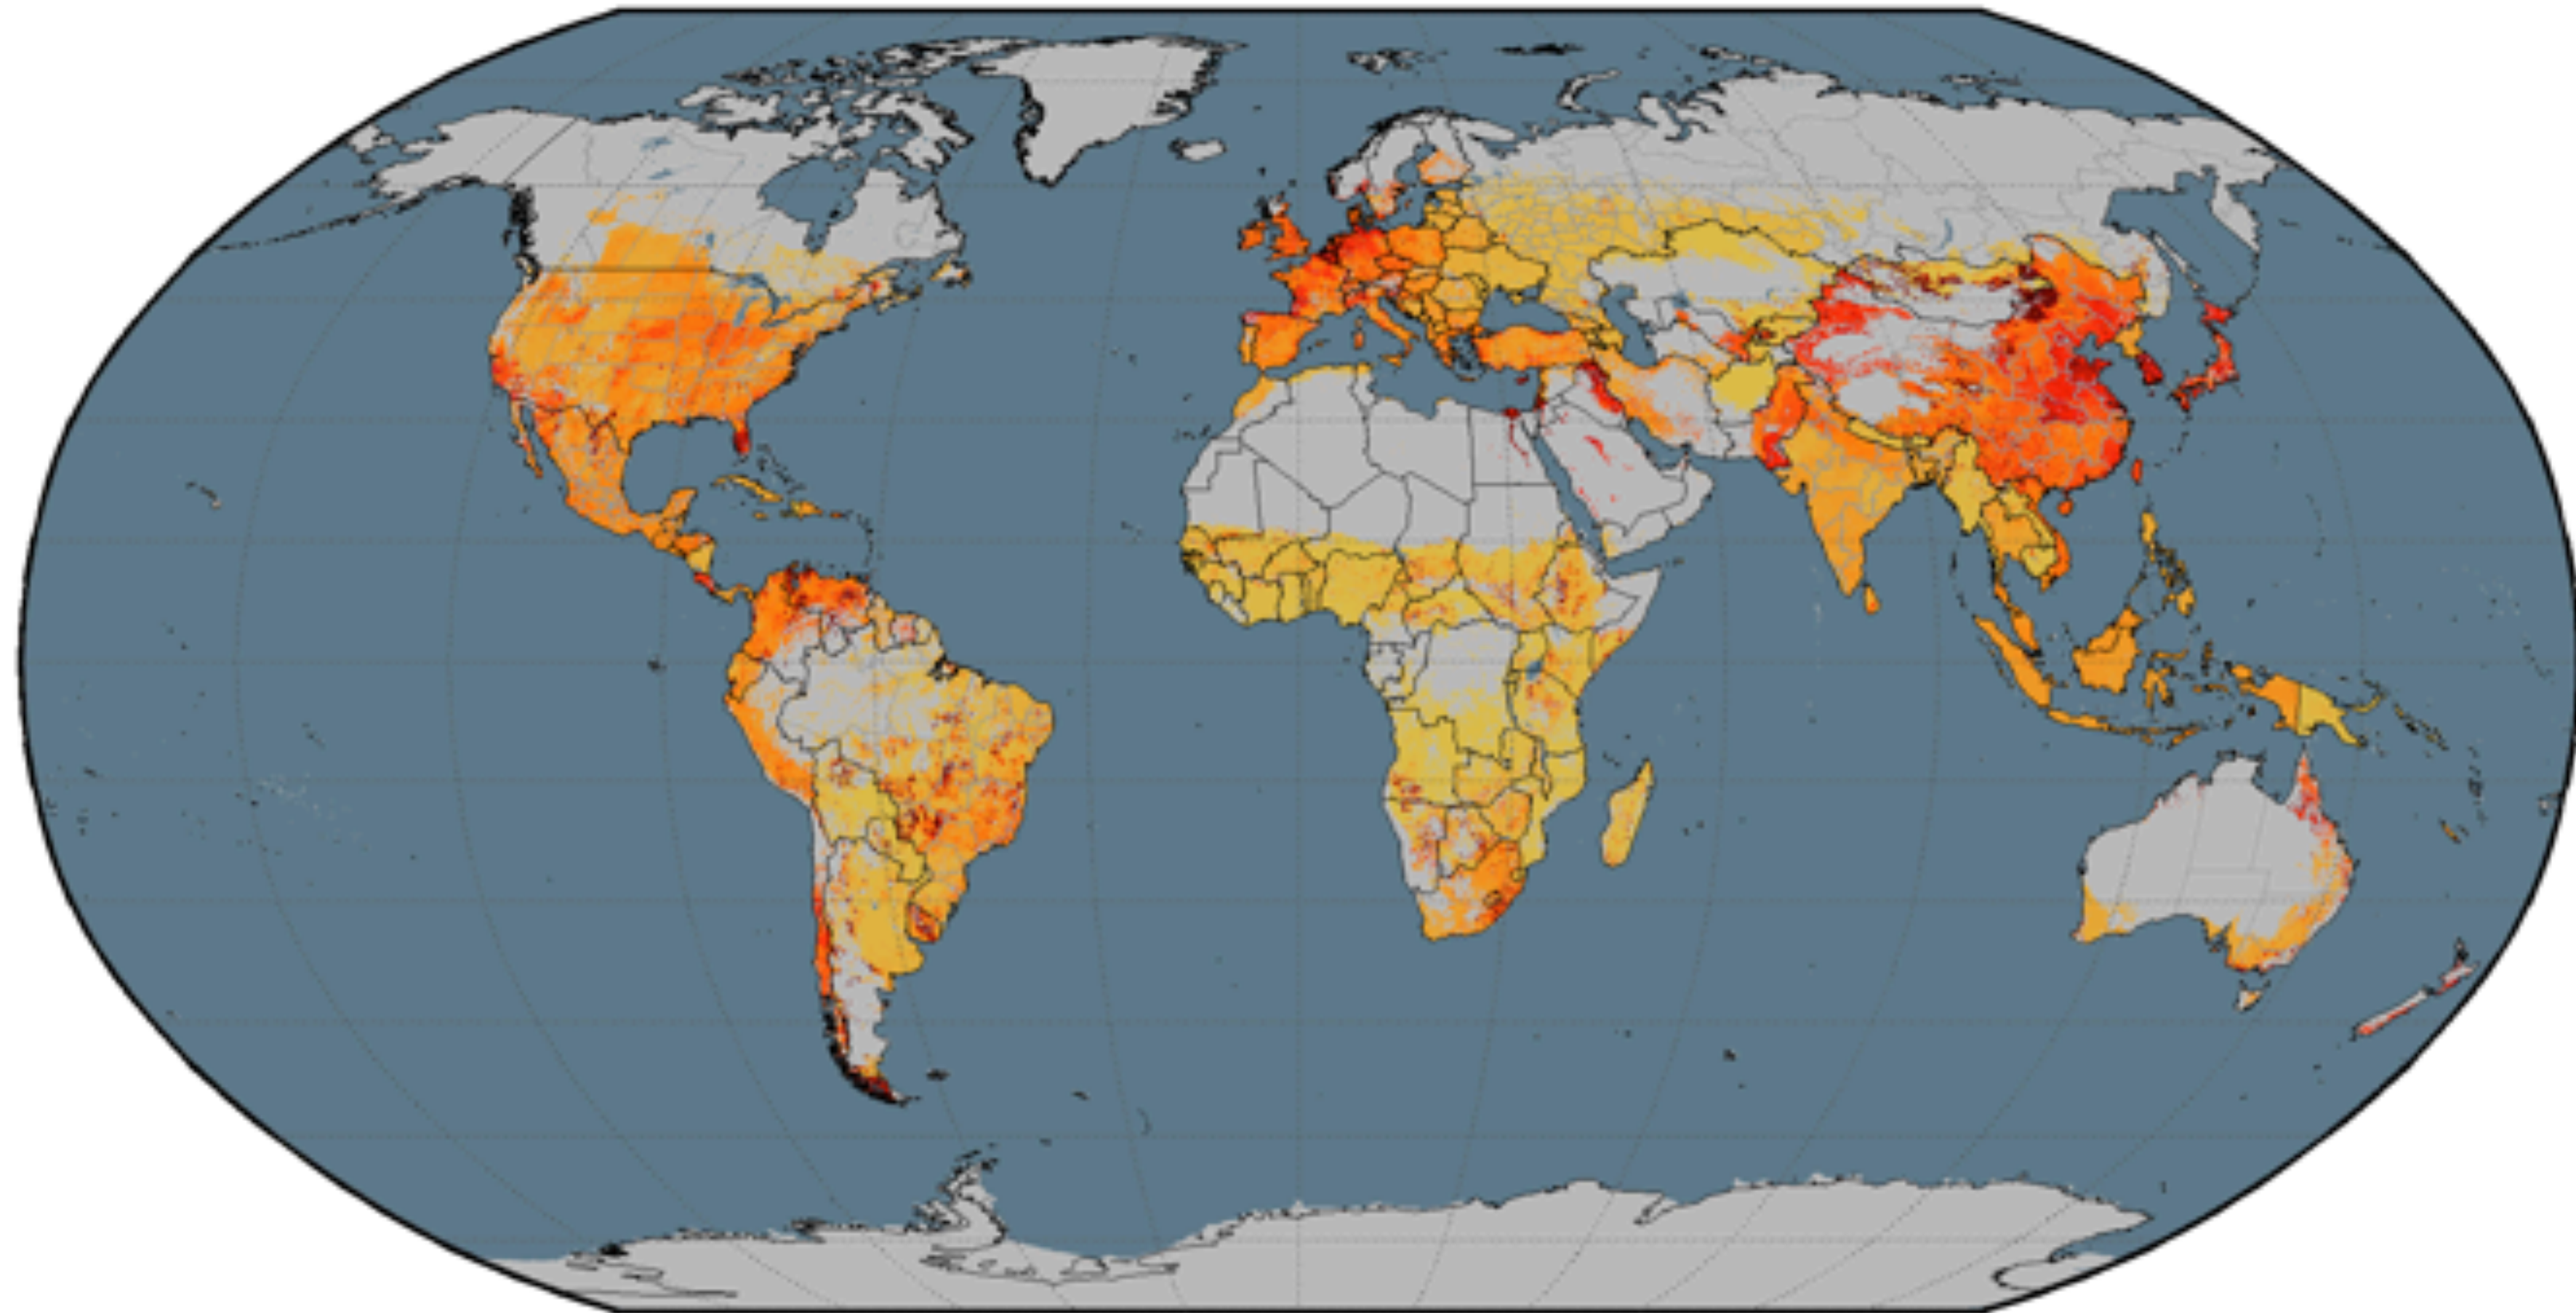

DRAINING PEATLANDS IS LEAST EFFICIENT

PER AREA, PEAT EMISSIONS 8-12X HIGHER THAN RICE CH₄ OR N₂O

NO LAUGHING MATTER

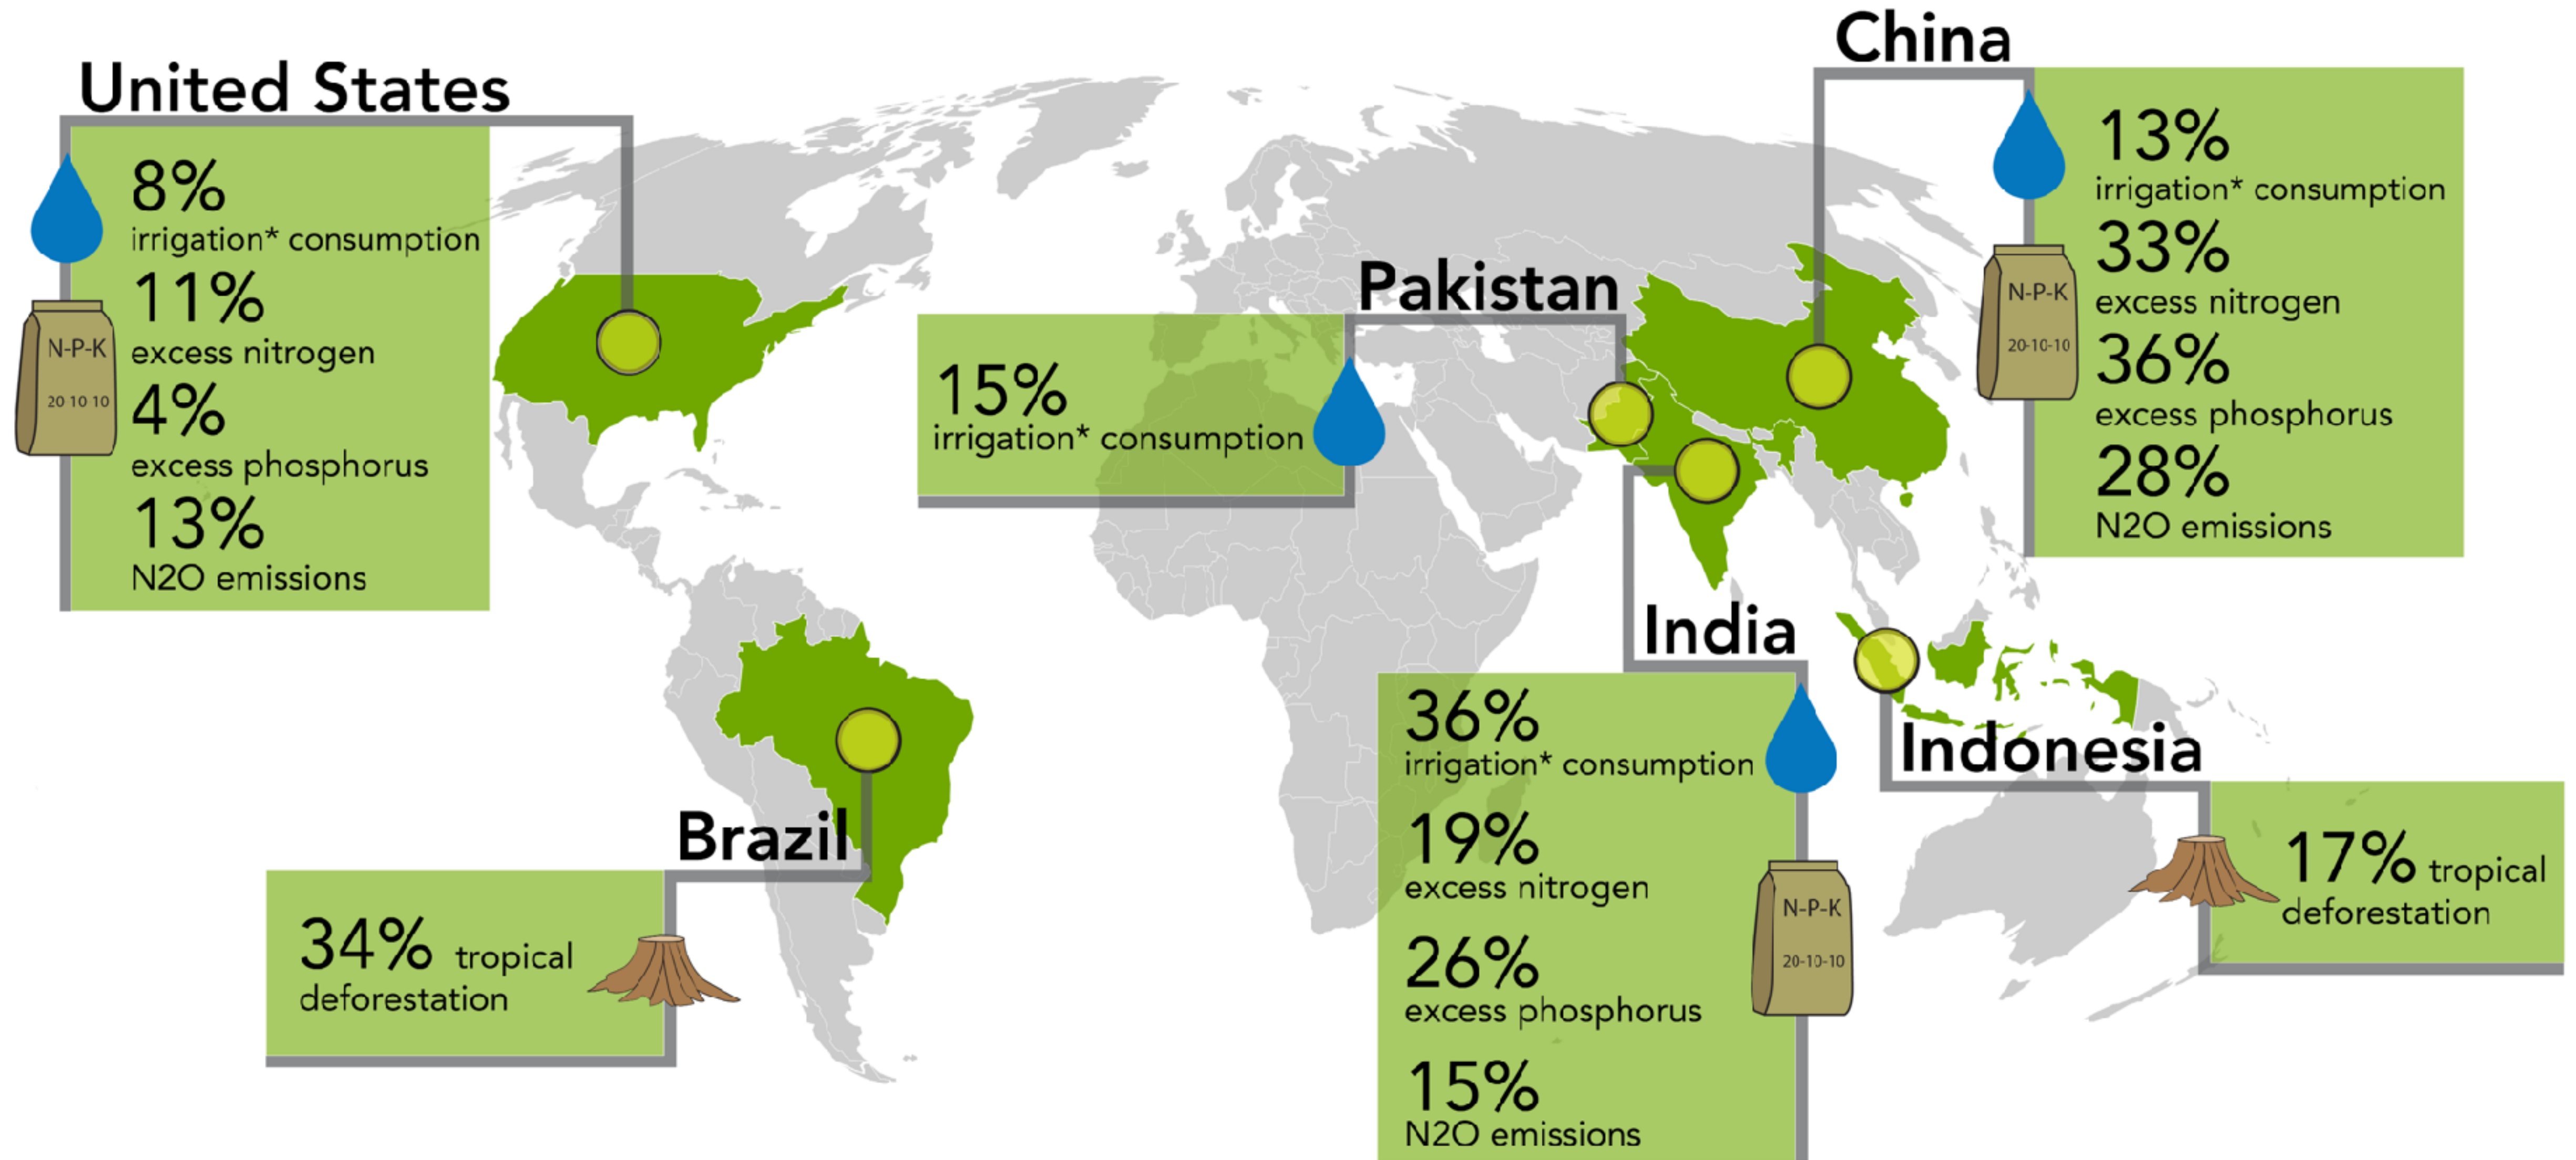

NITROUS OXIDE EMISSIONS

kg/ha

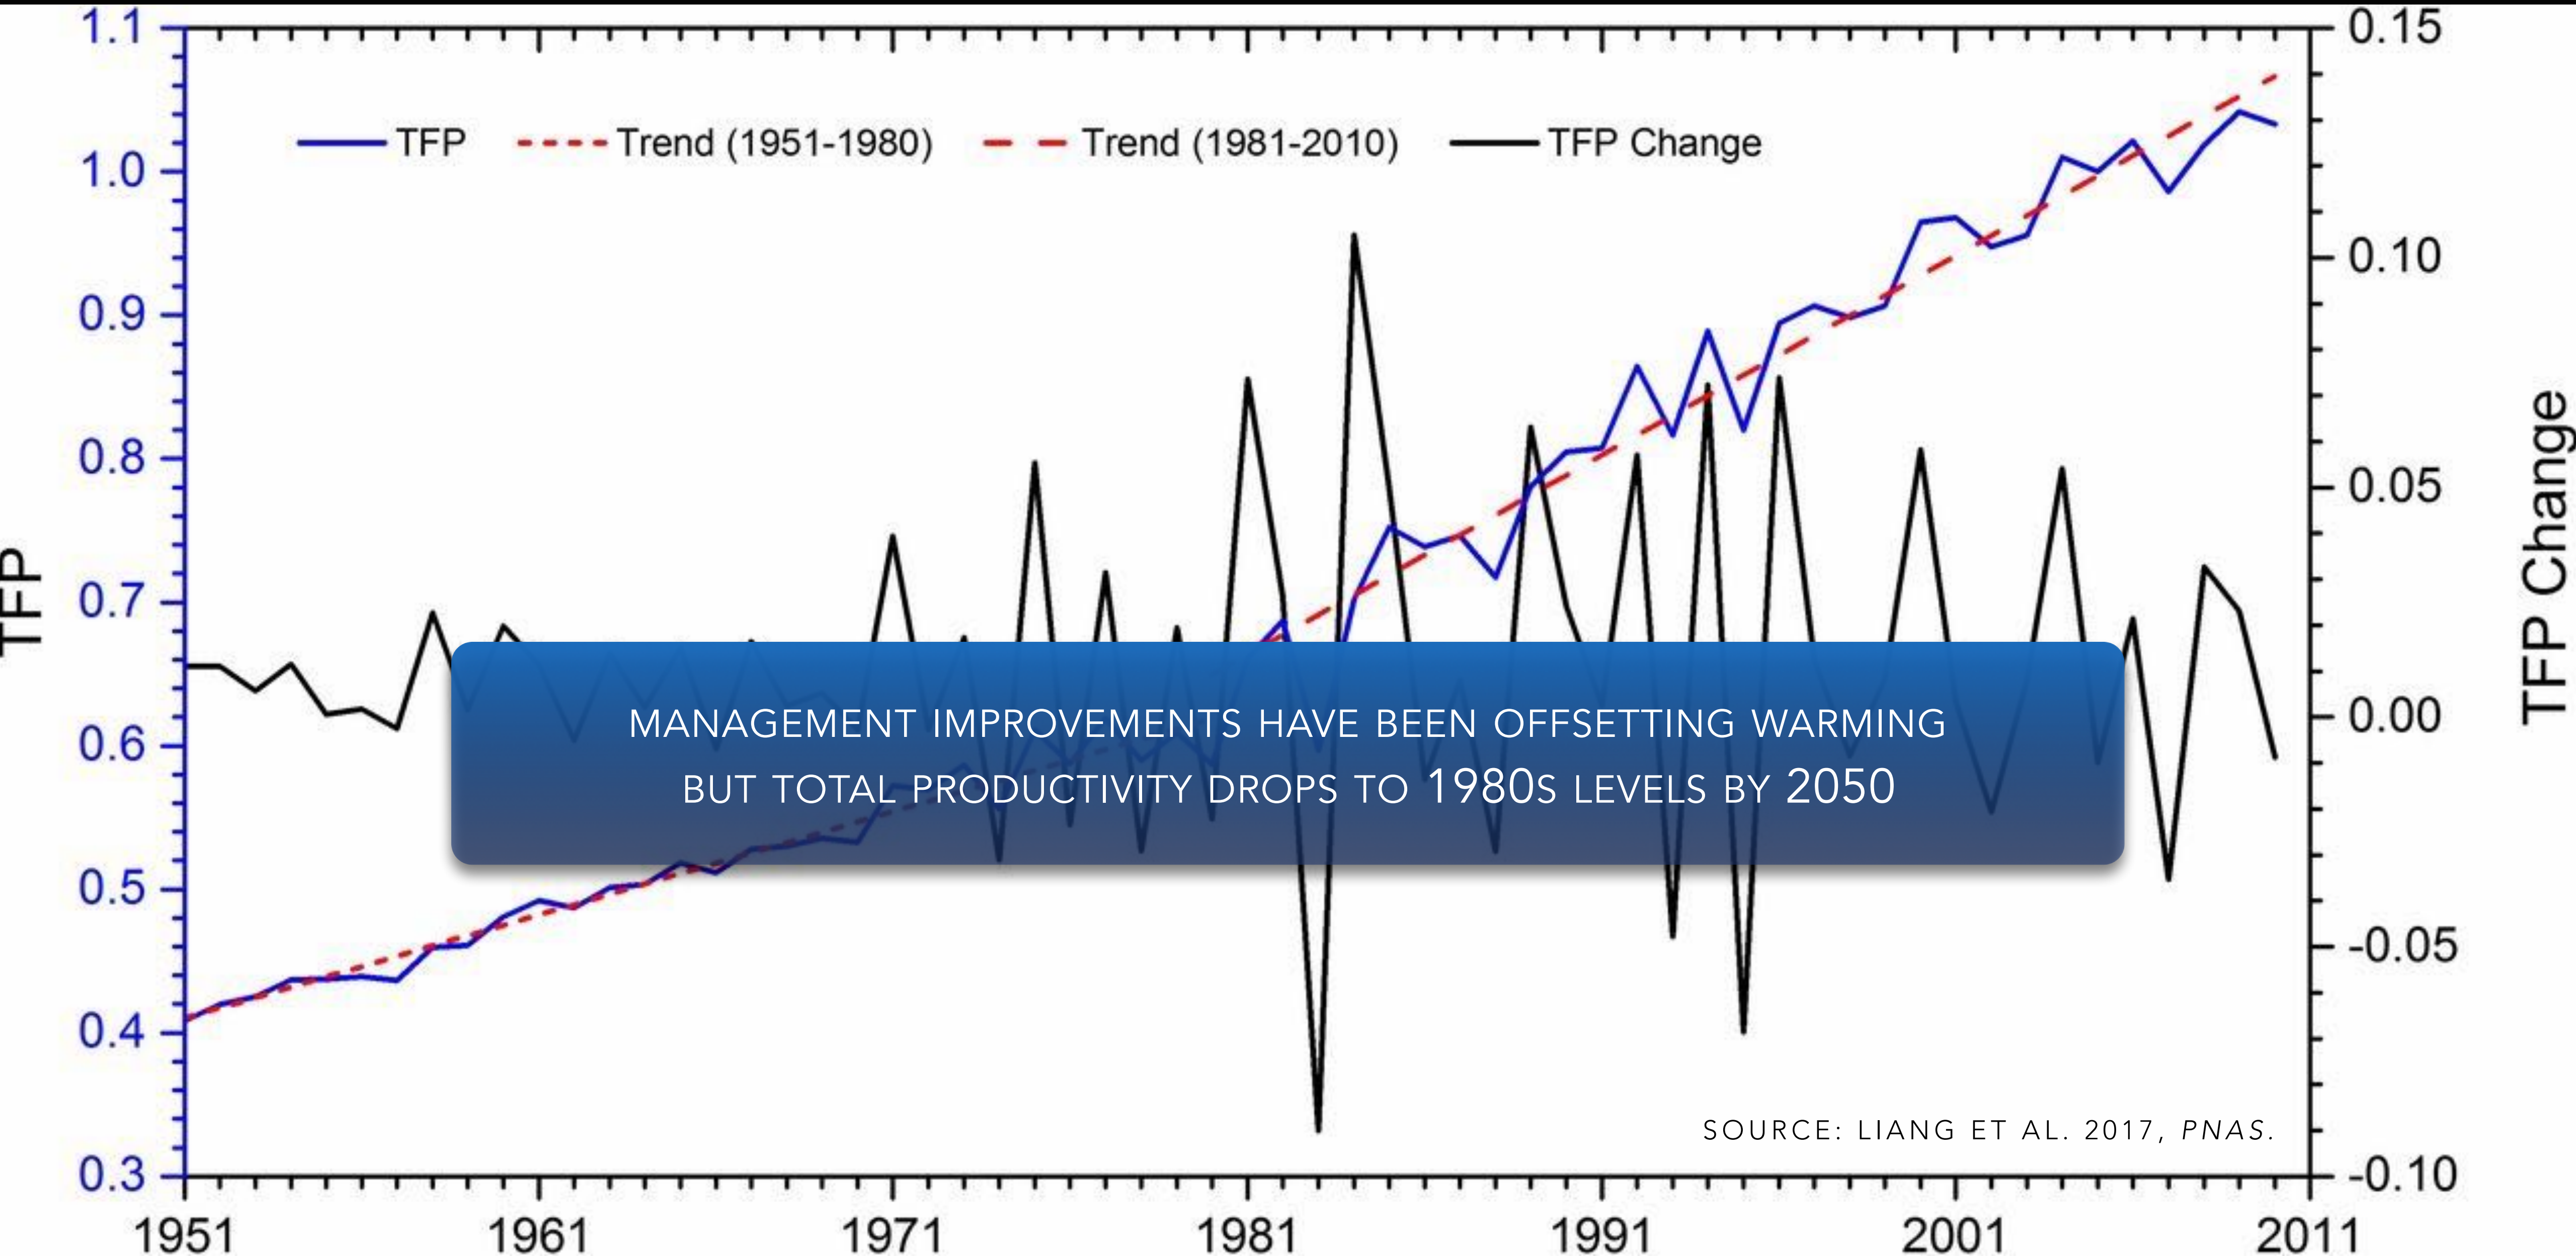

4. FOCUS ON LEVERAGE POINTS

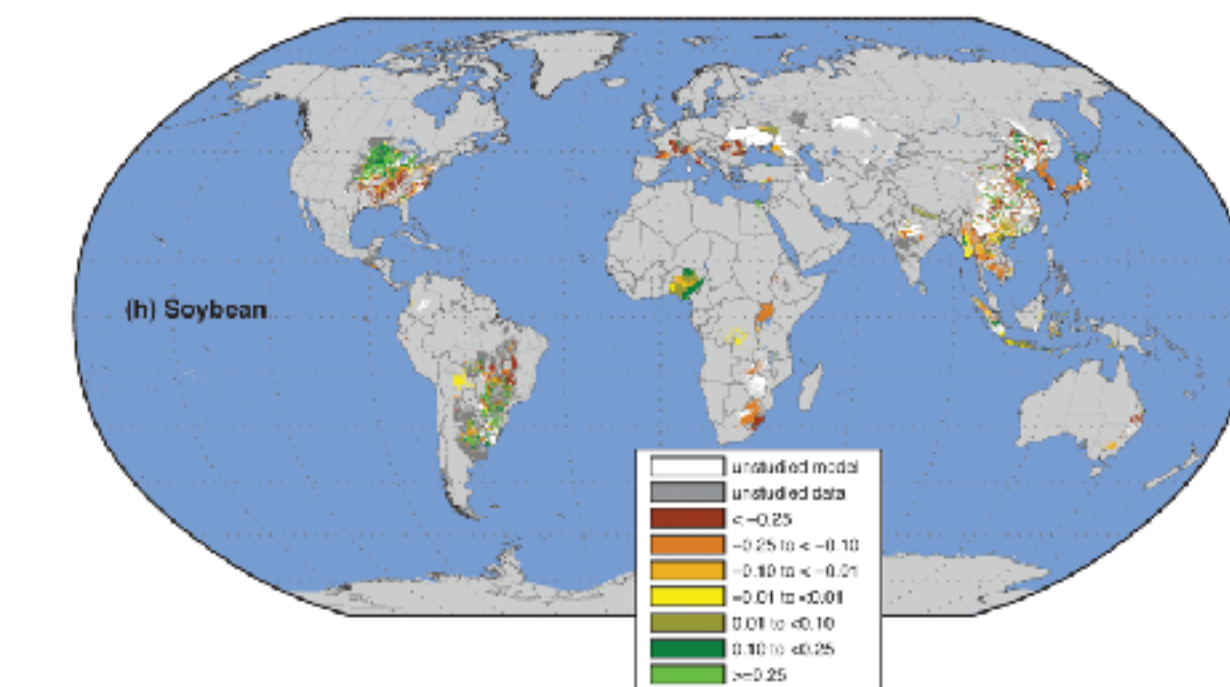

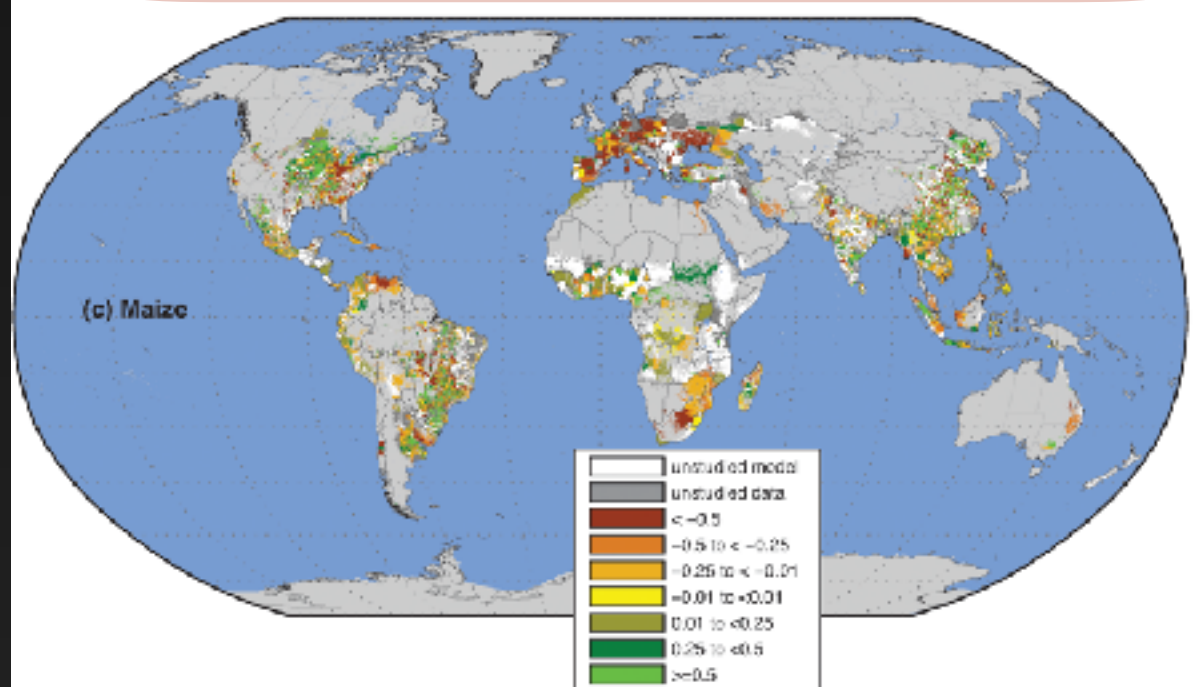

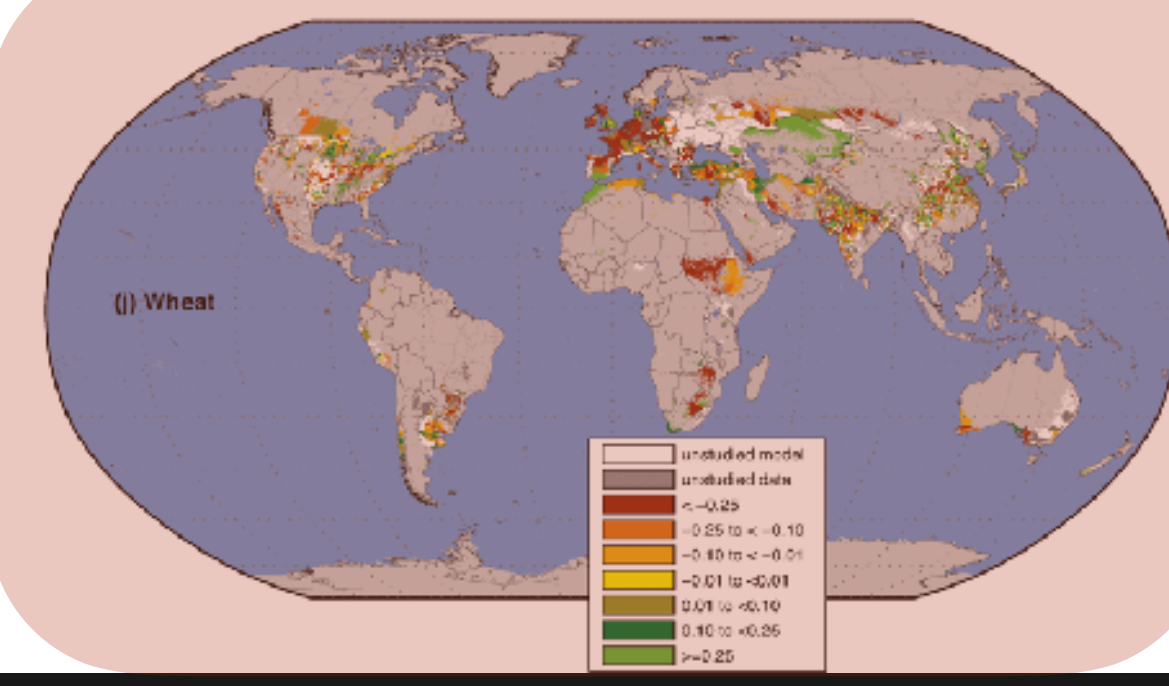

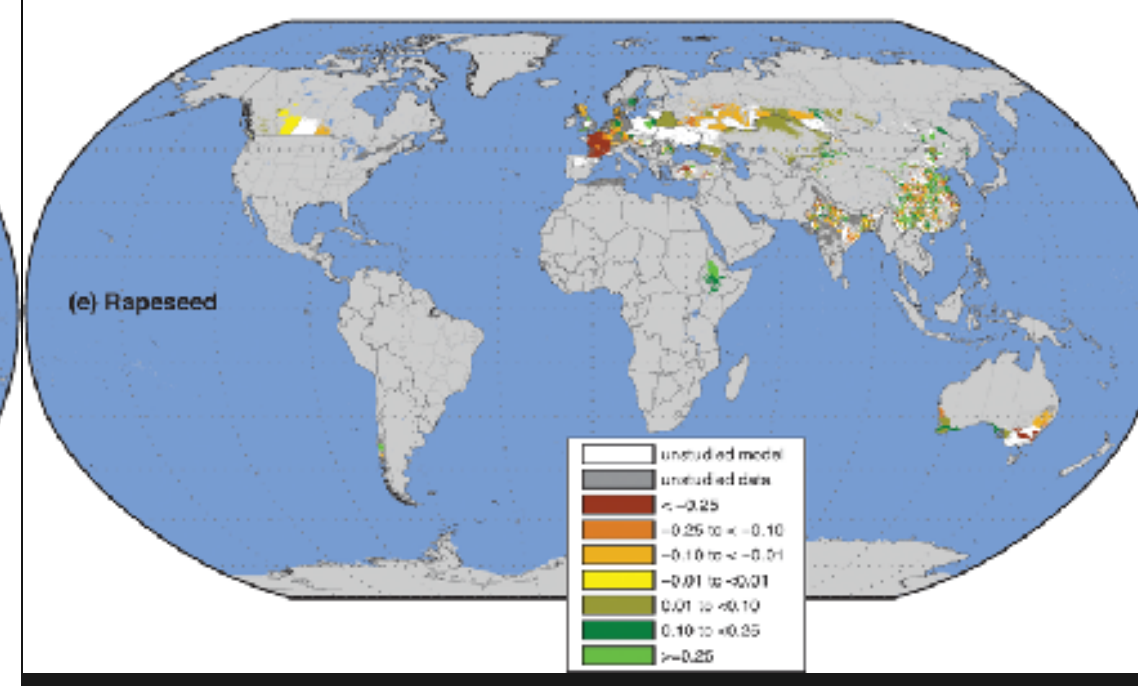

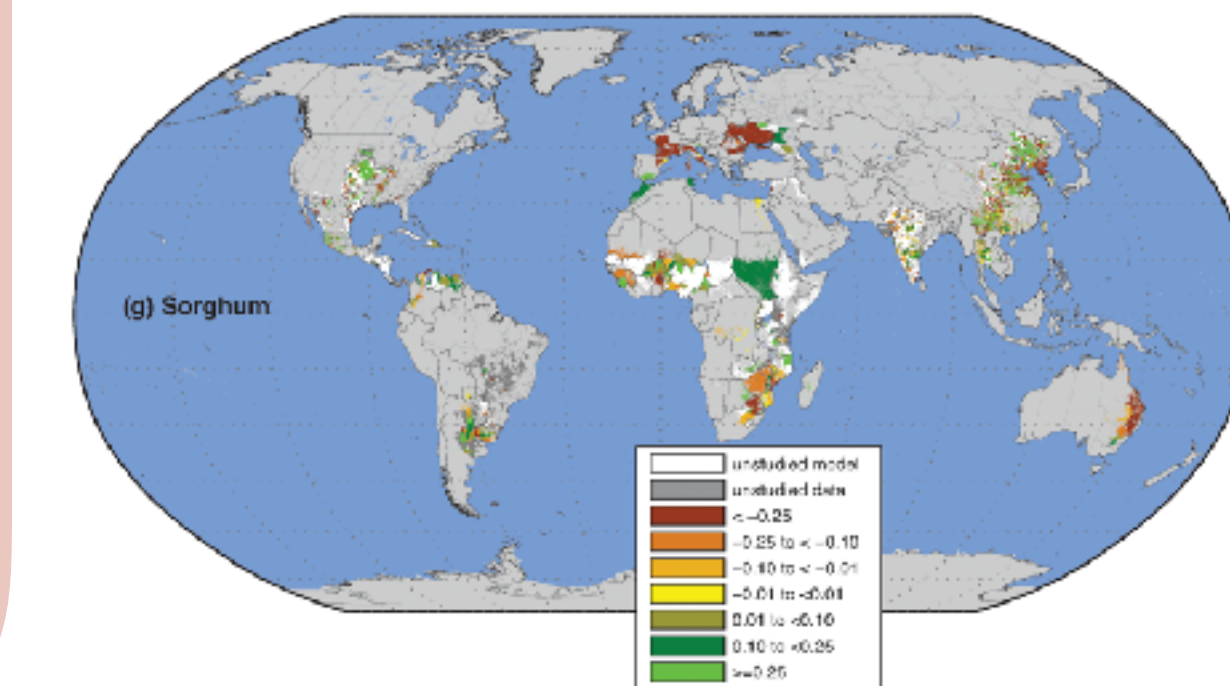

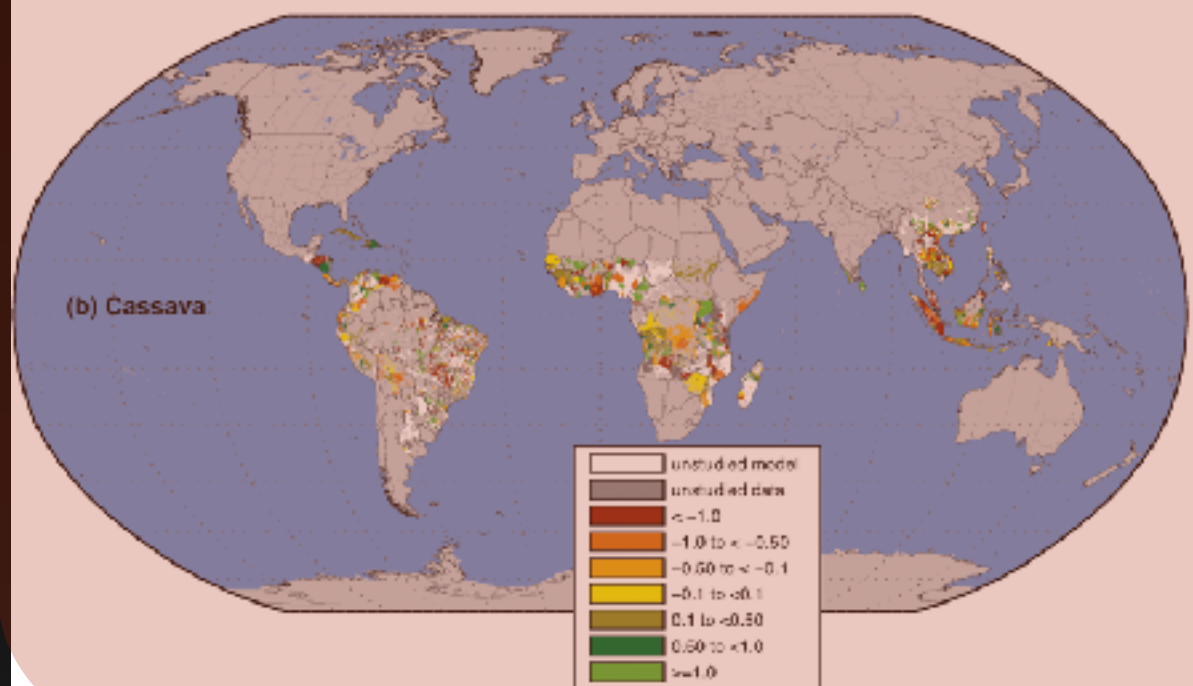

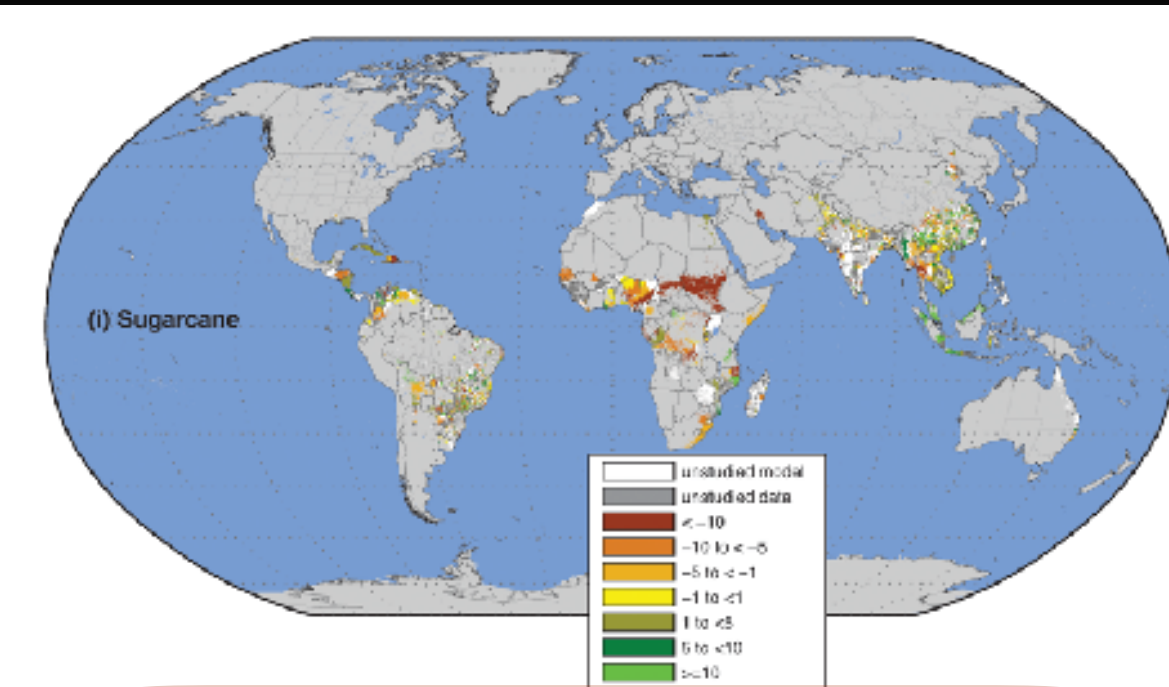

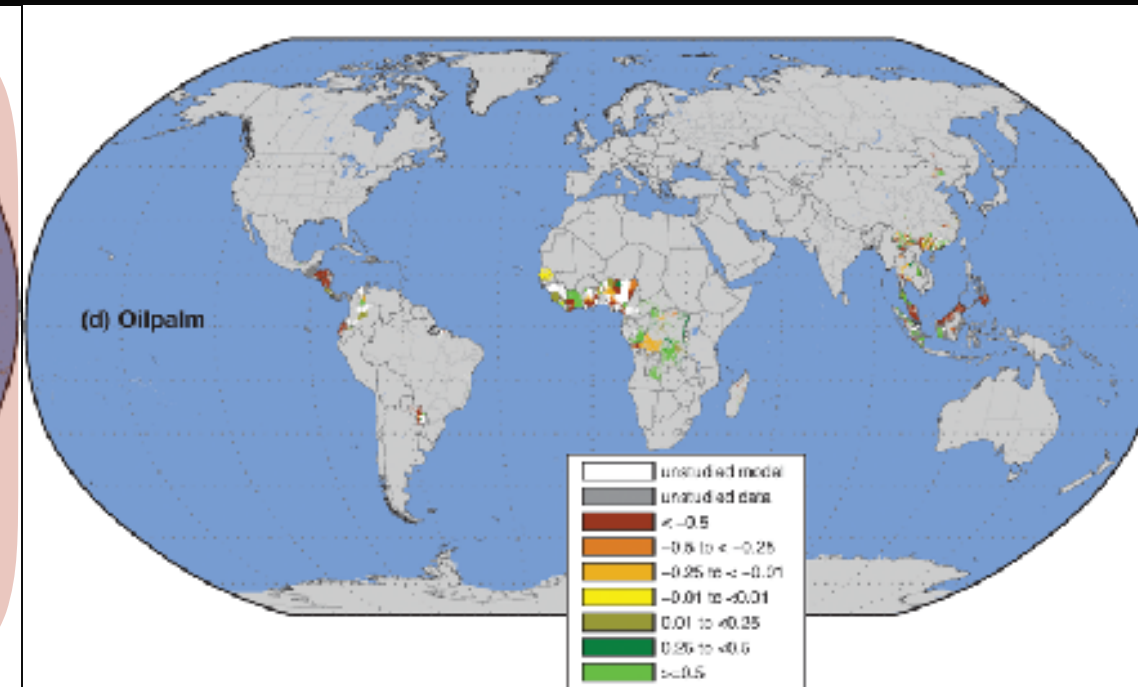

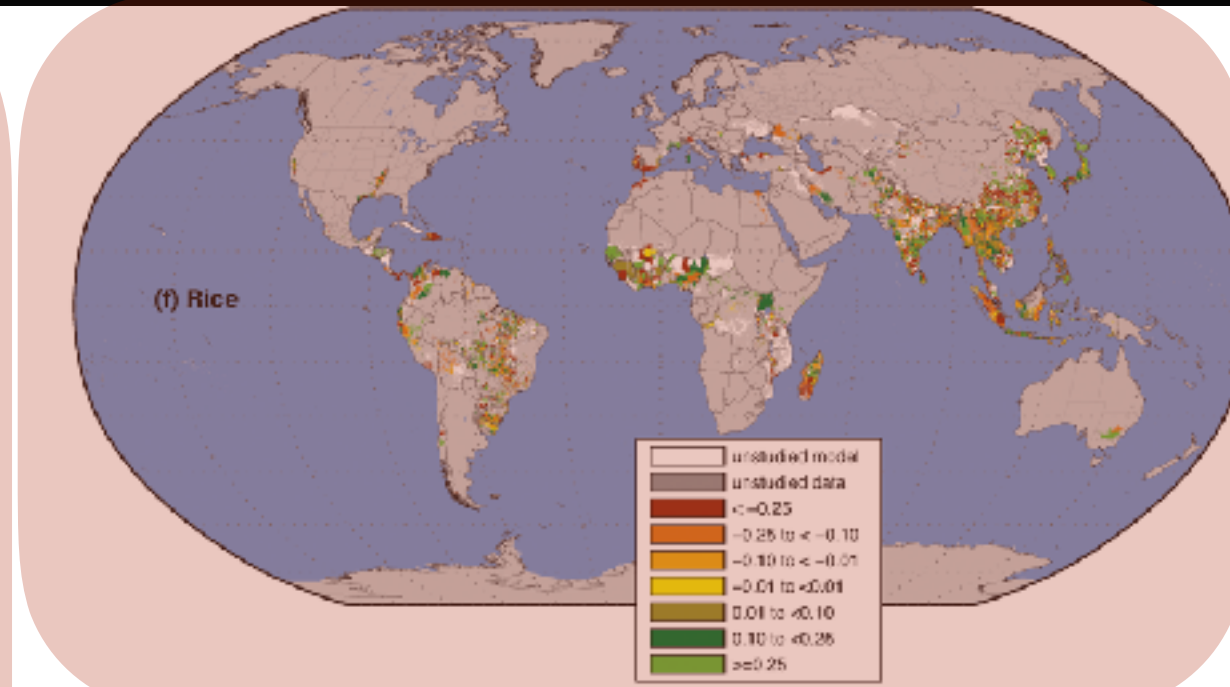

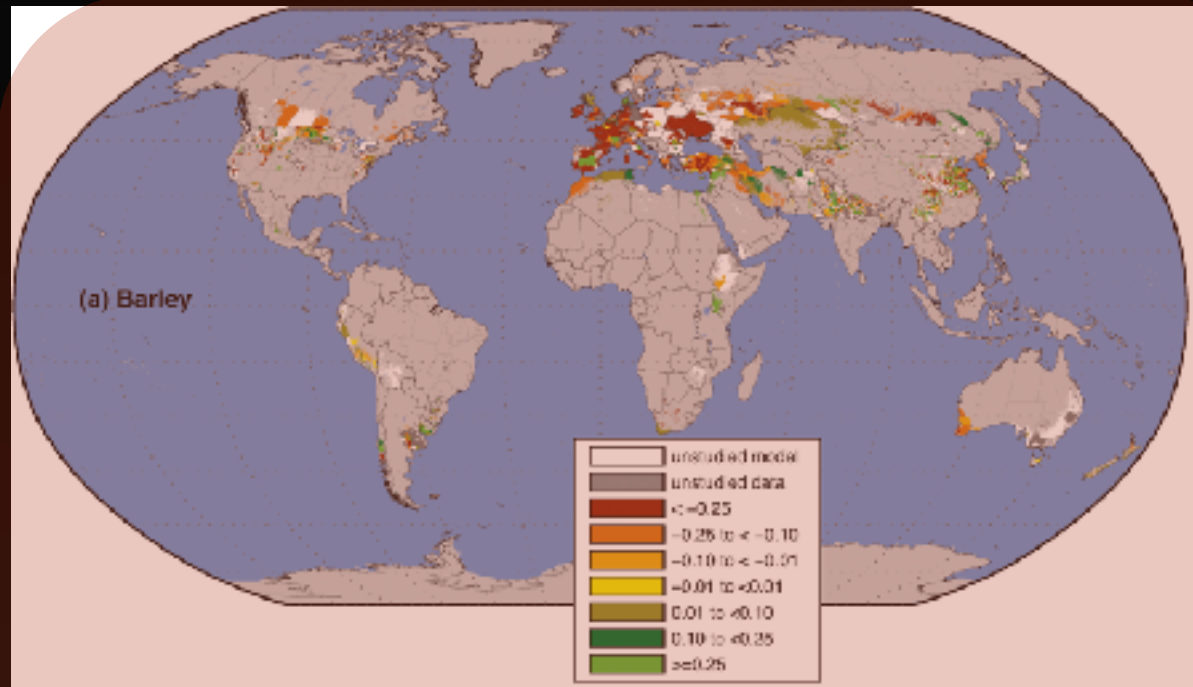

"WINNERS" & LOSERS

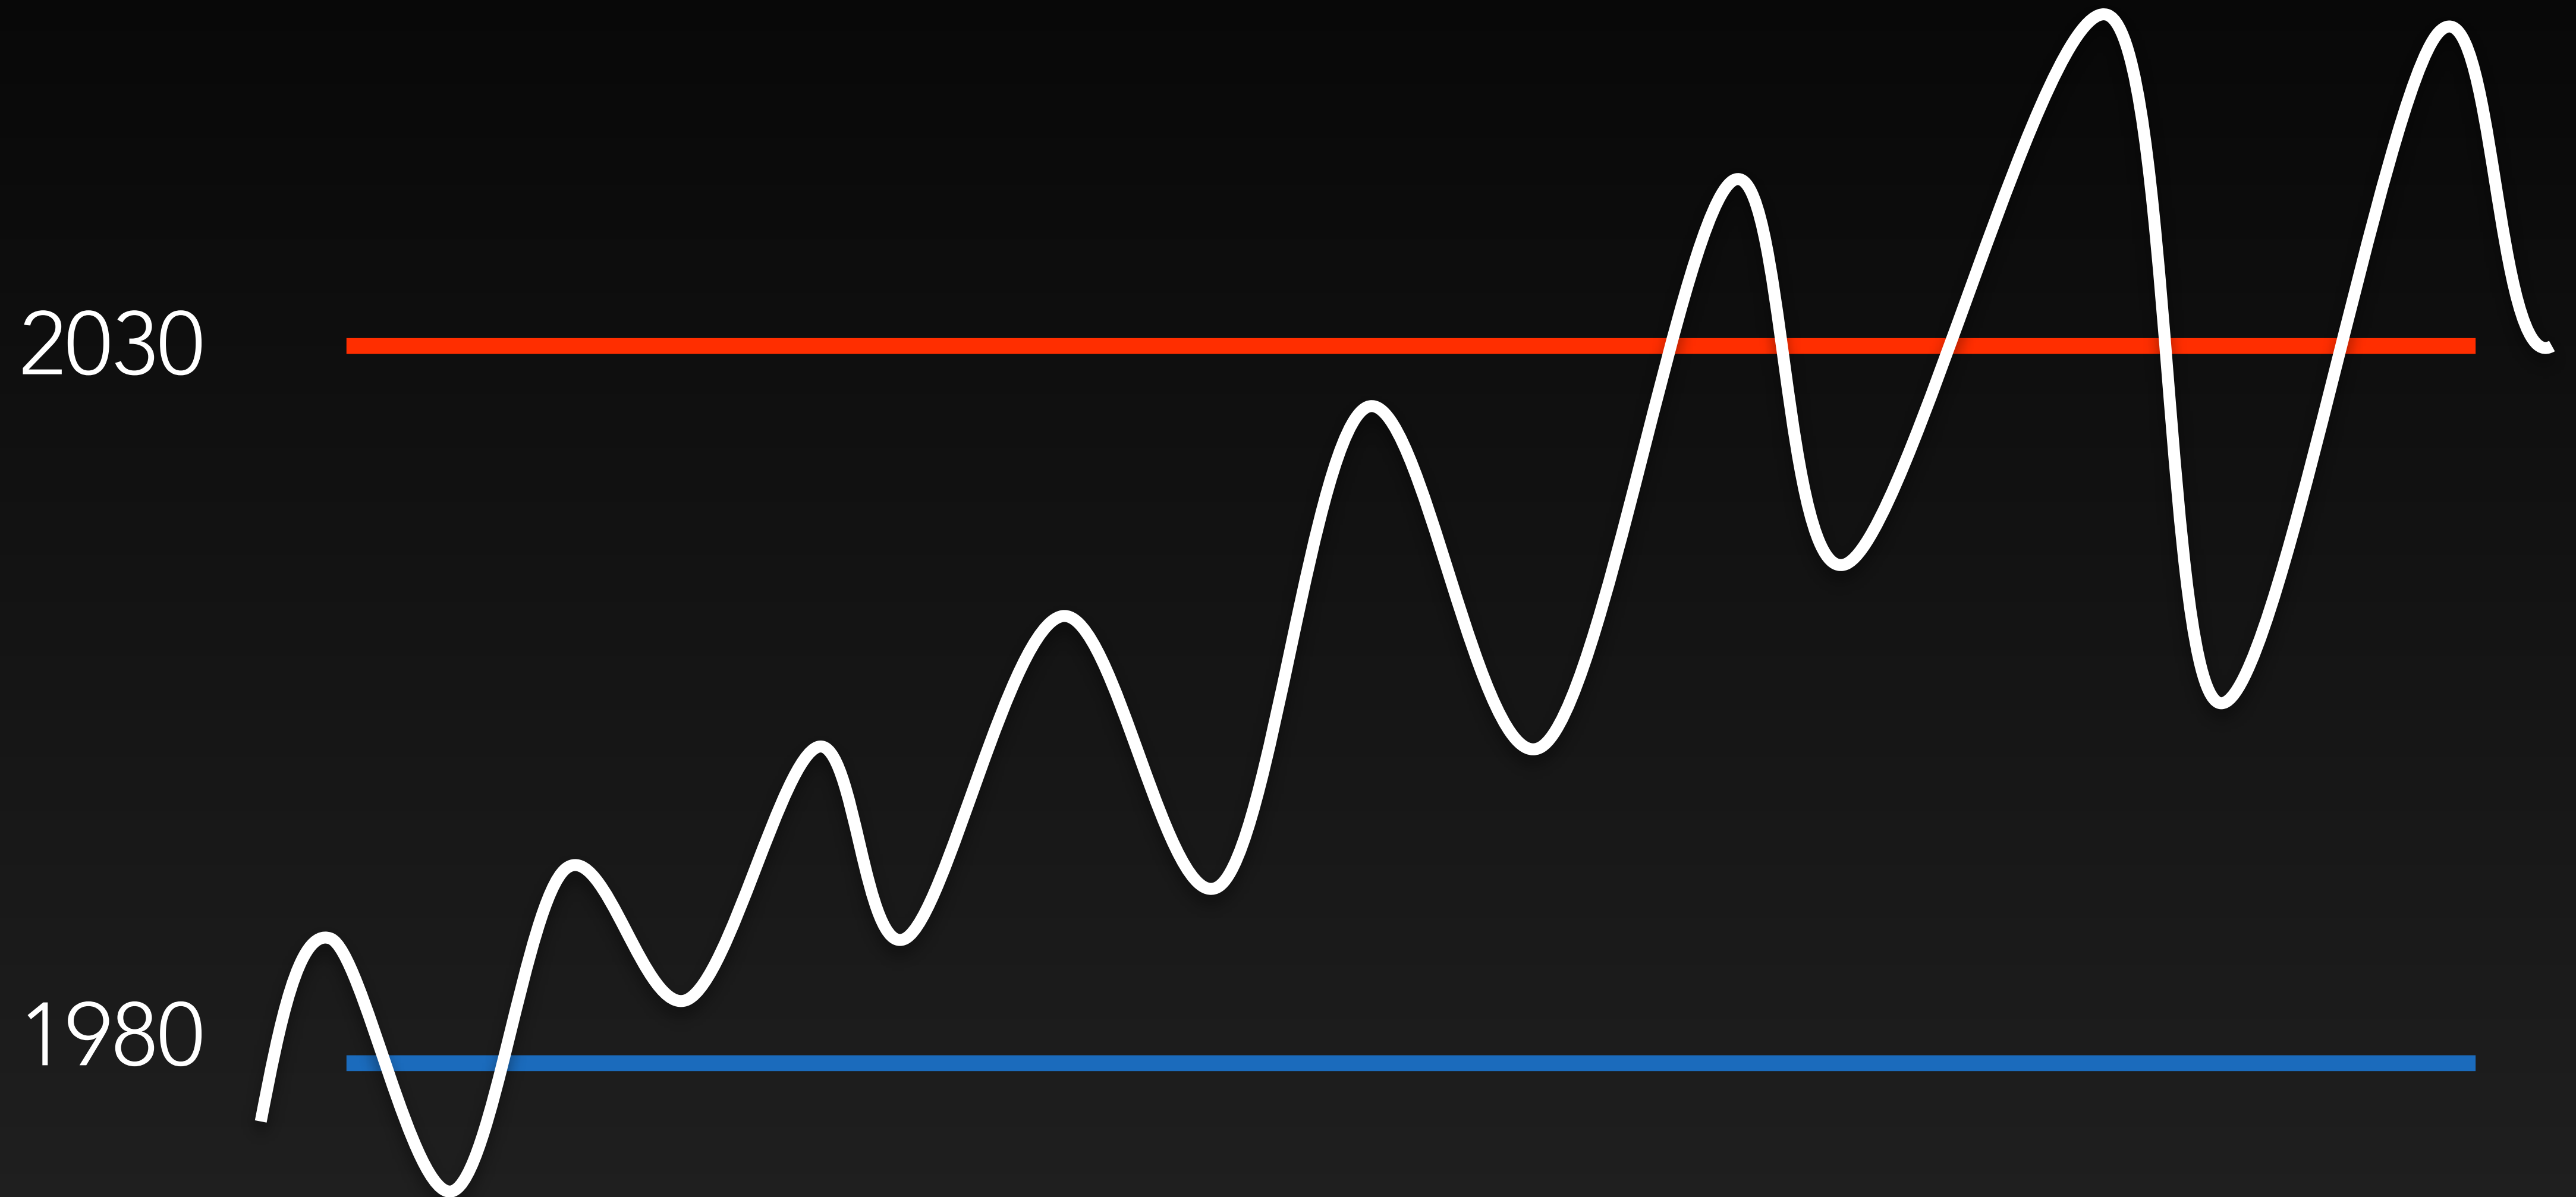

USA - TOTAL FACTOR PRODUCTIVITY

CLIMATE CHANGE(D)

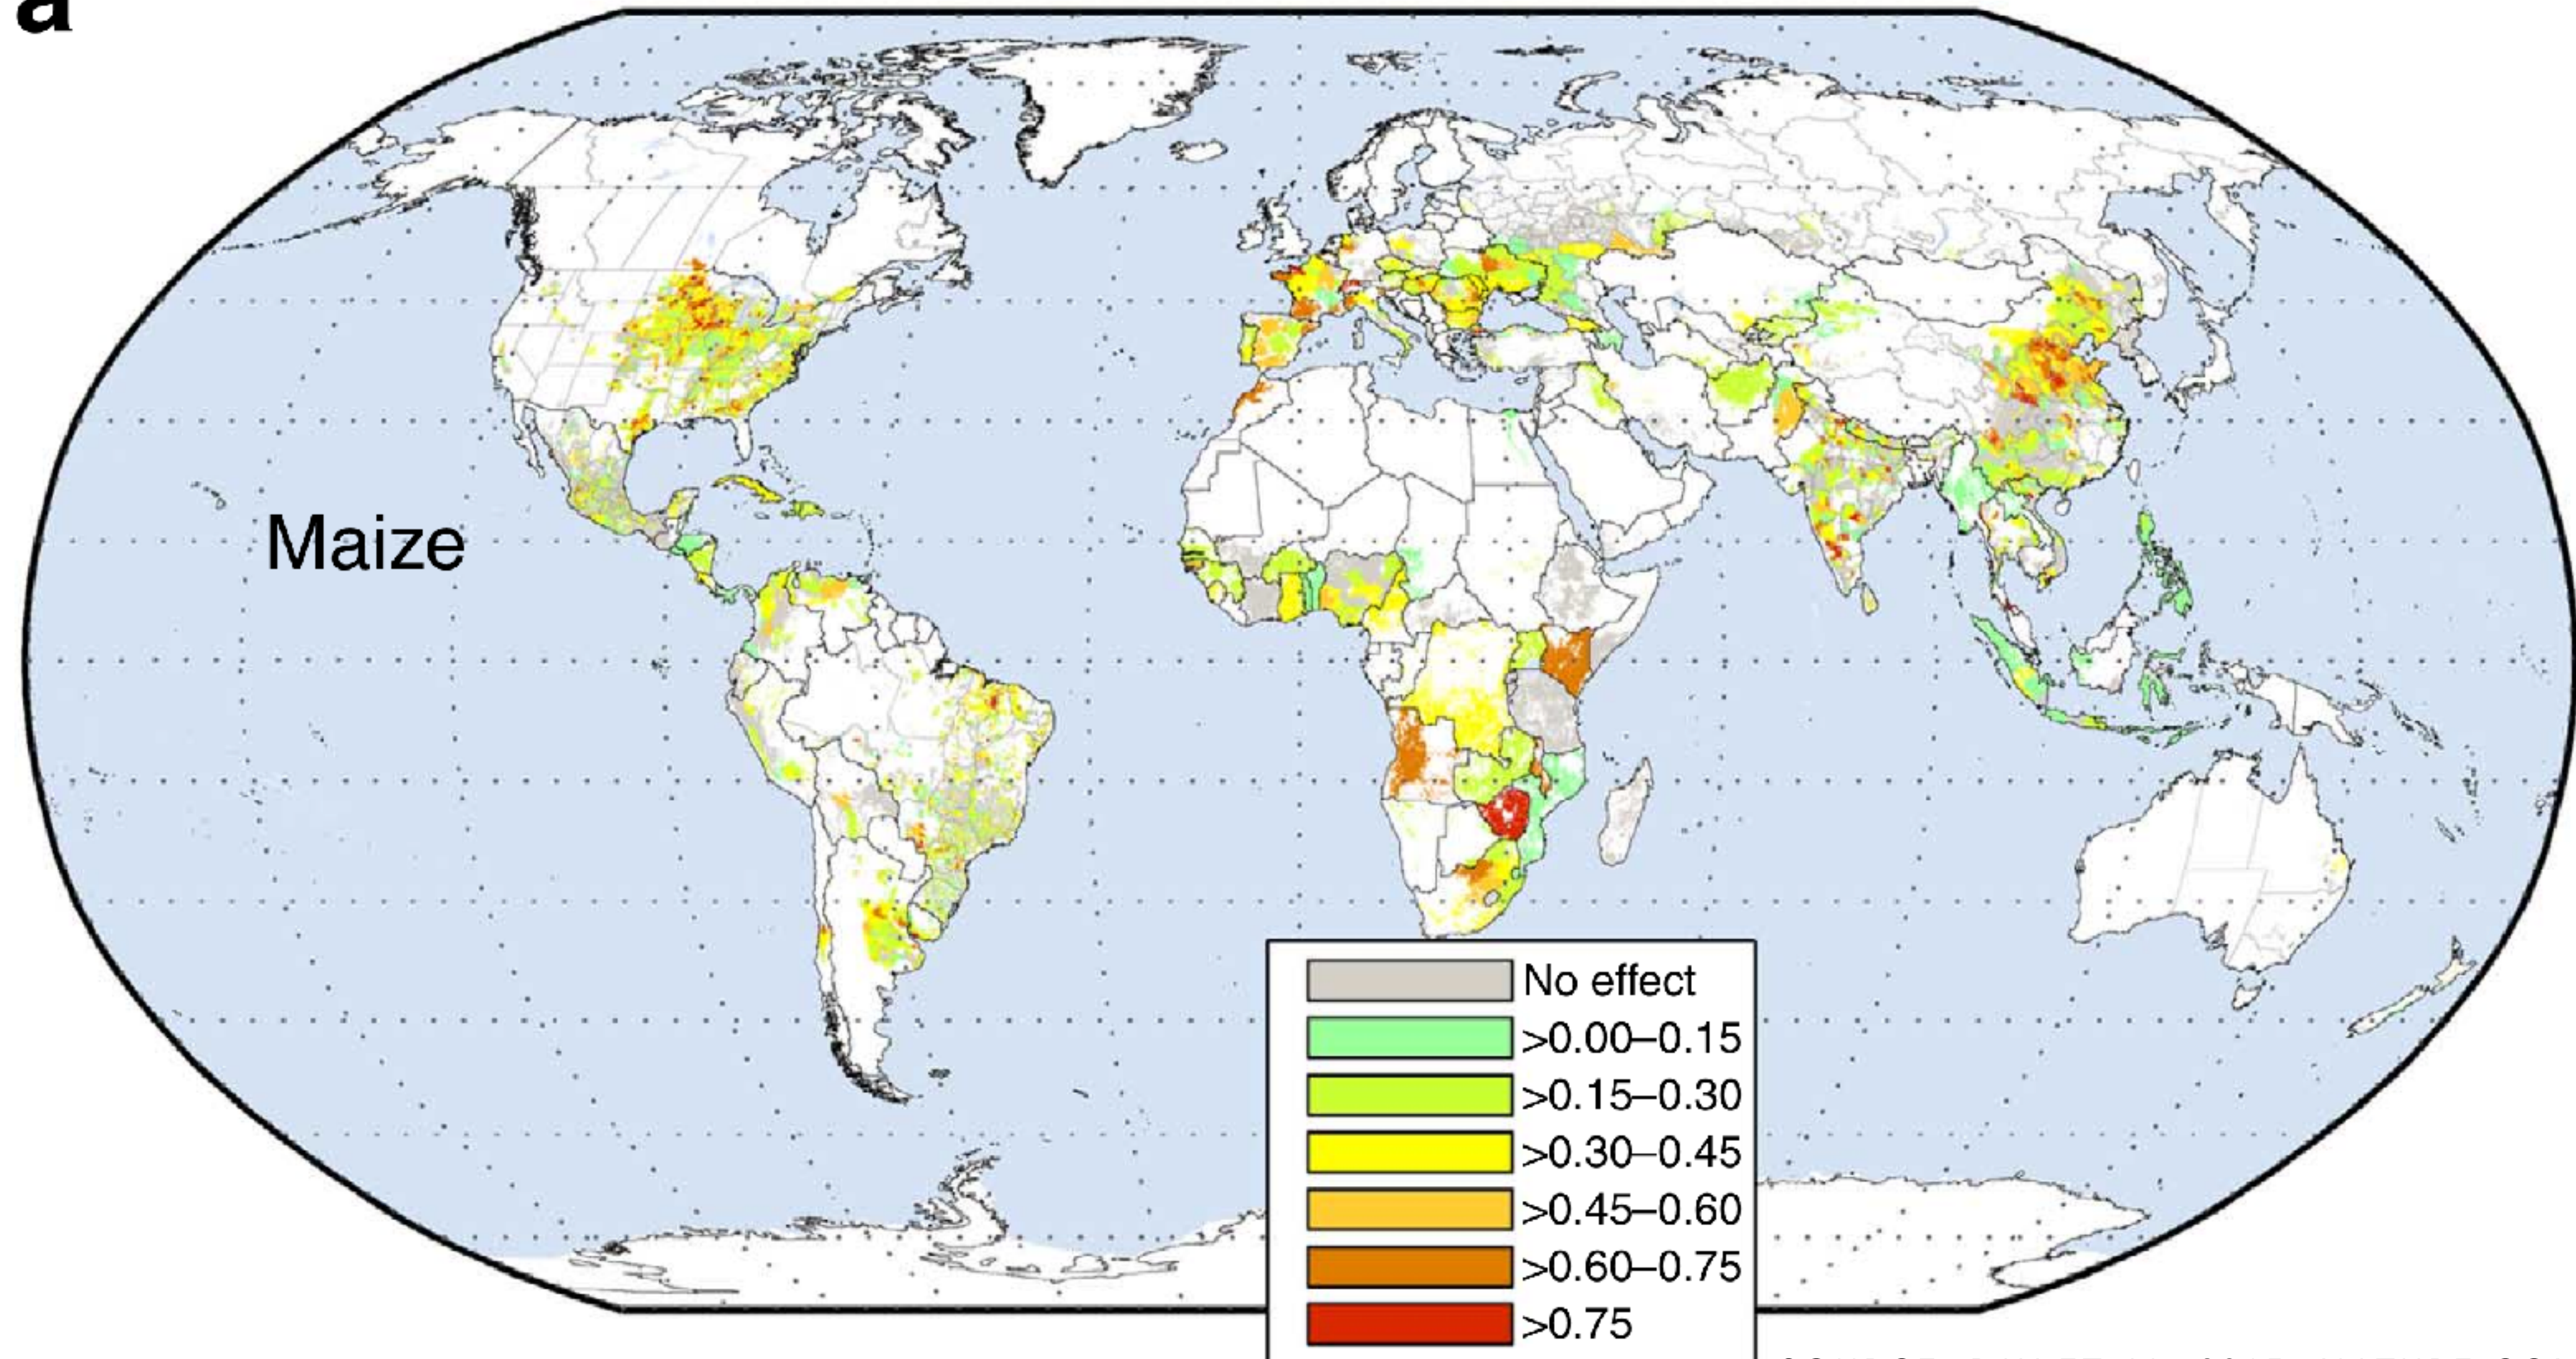

CHANGE IN THE MEAN VS. VARIABILITY

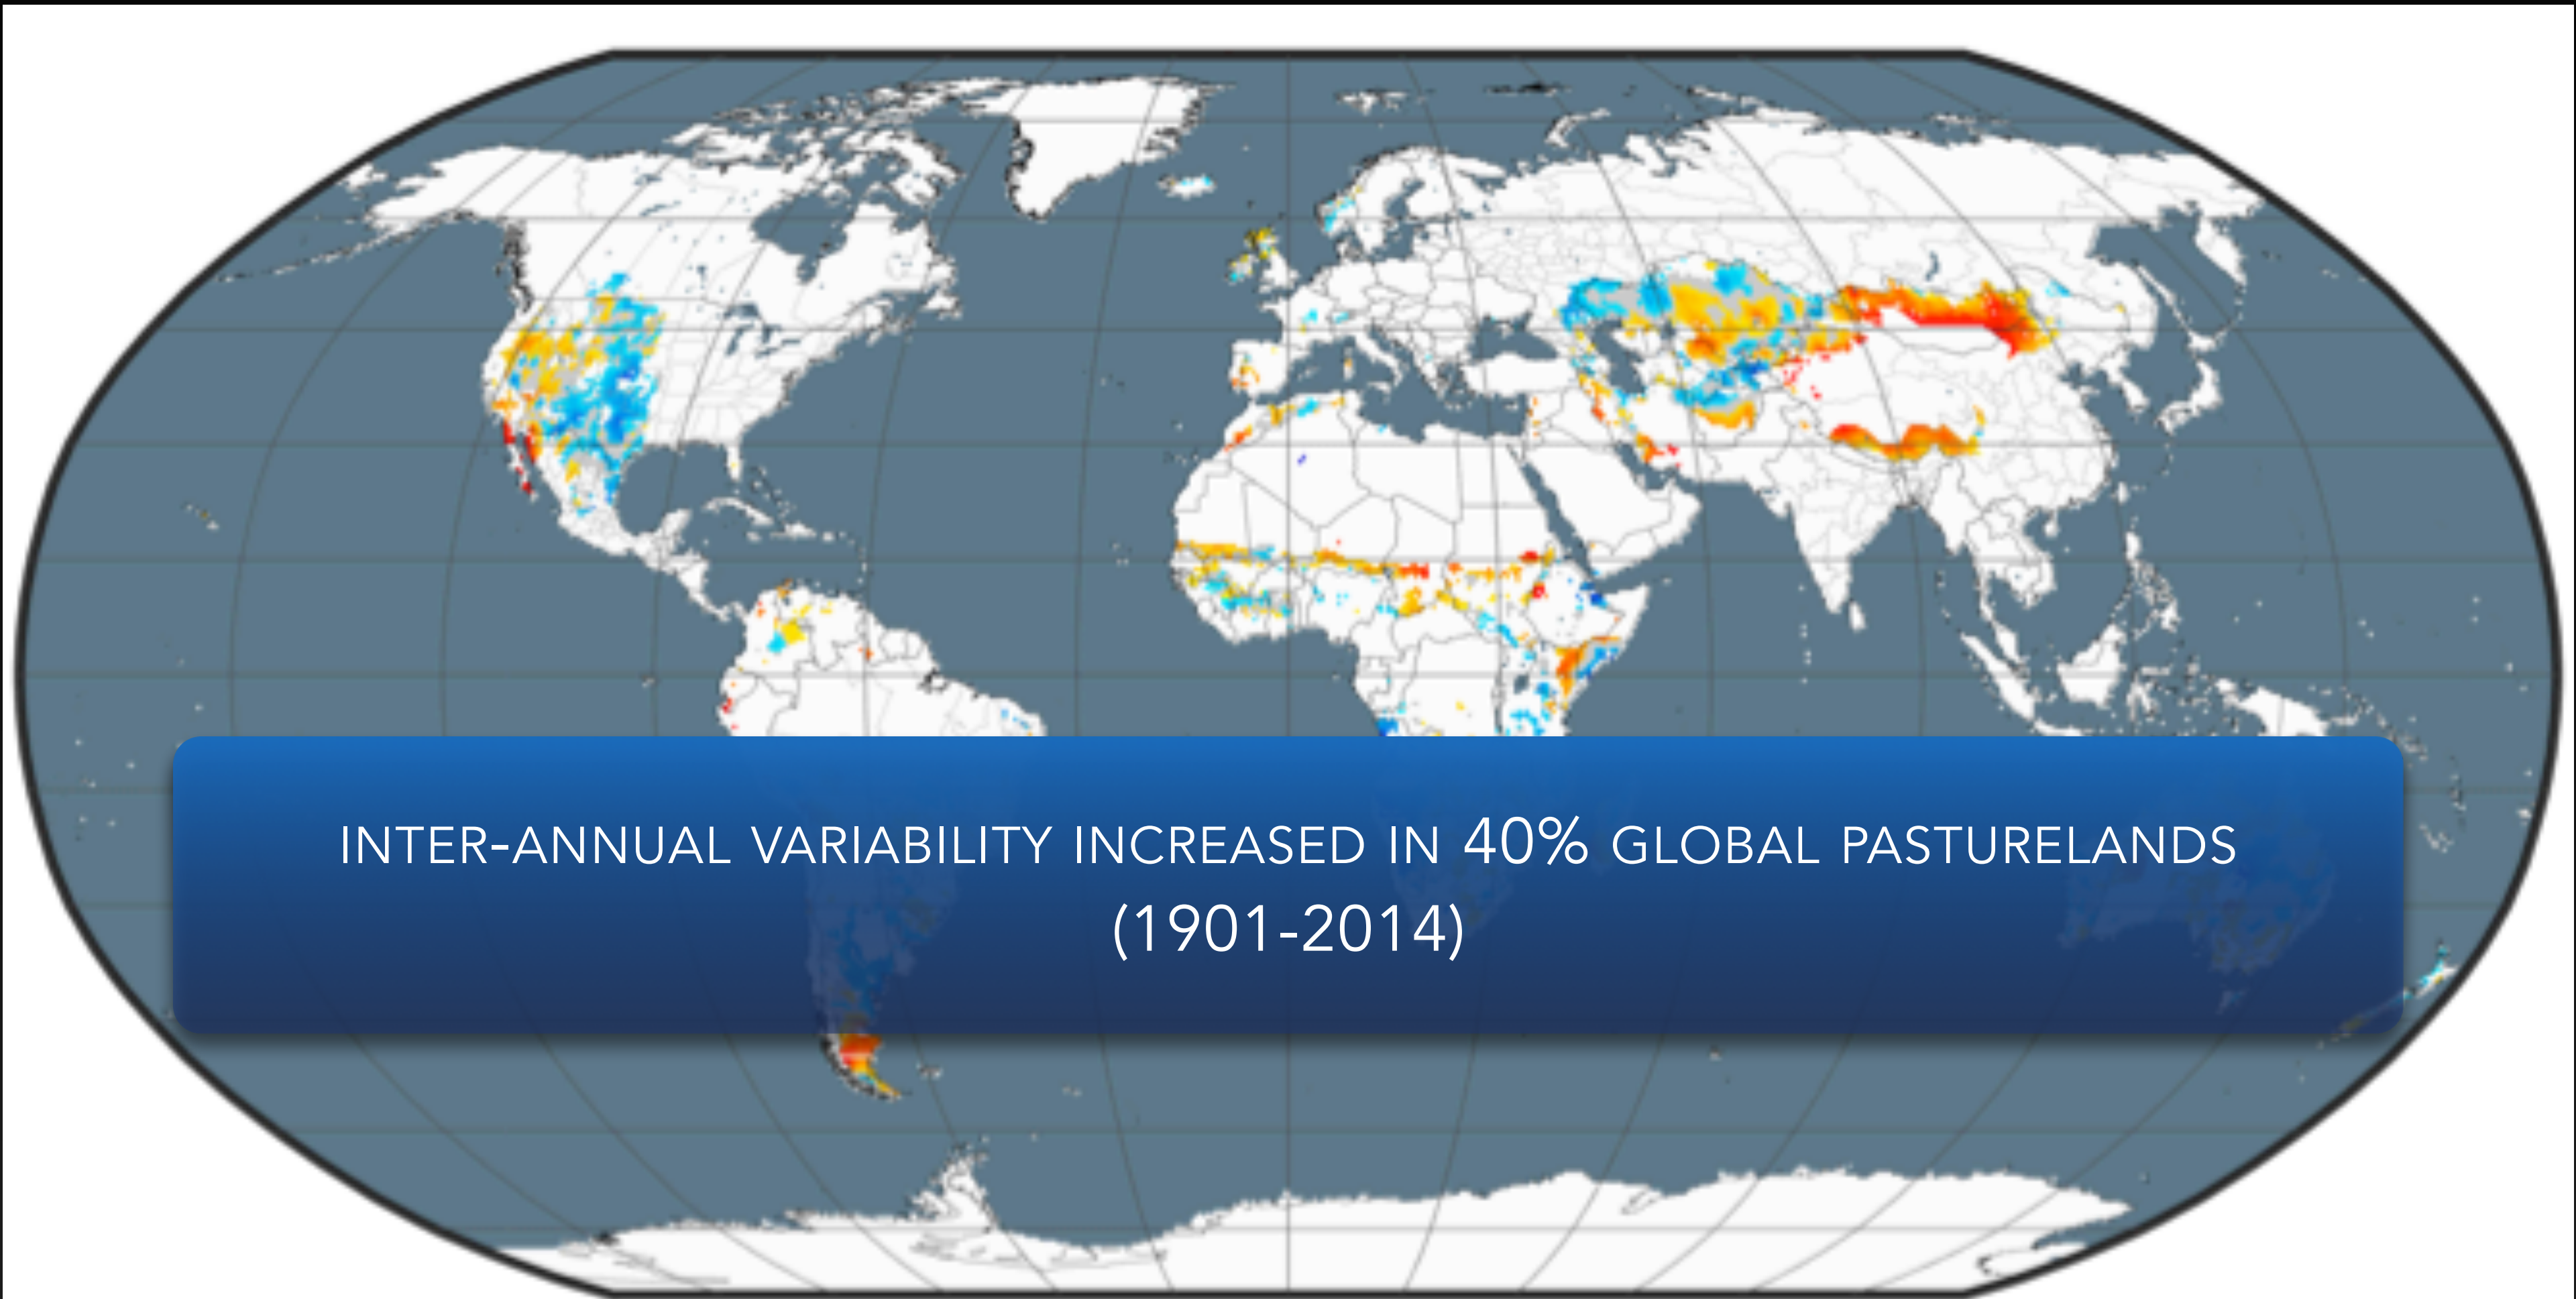

CLIMATE VARIABILITY EXPLAINS 1/3 OF YIELD VARIABILITY

a

INTER-ANNUAL PRECIPITATION VARIABILITY

SLOAT ET AL. 2018. NAT CLIM CHNG

FOOD - CLIMATE -
NUTRITION

Fish, 150 g fillet
>100% Vitamin B12
100% Selenium
71% Protein
14% Energy

Broccoli, 1 c
>100% Vitamin C
42% Folate
7% Protein
3% Energy

Sweet Potato, 1 c
>100% Vitamin A
25% Iron
12% Energy
8% Protein

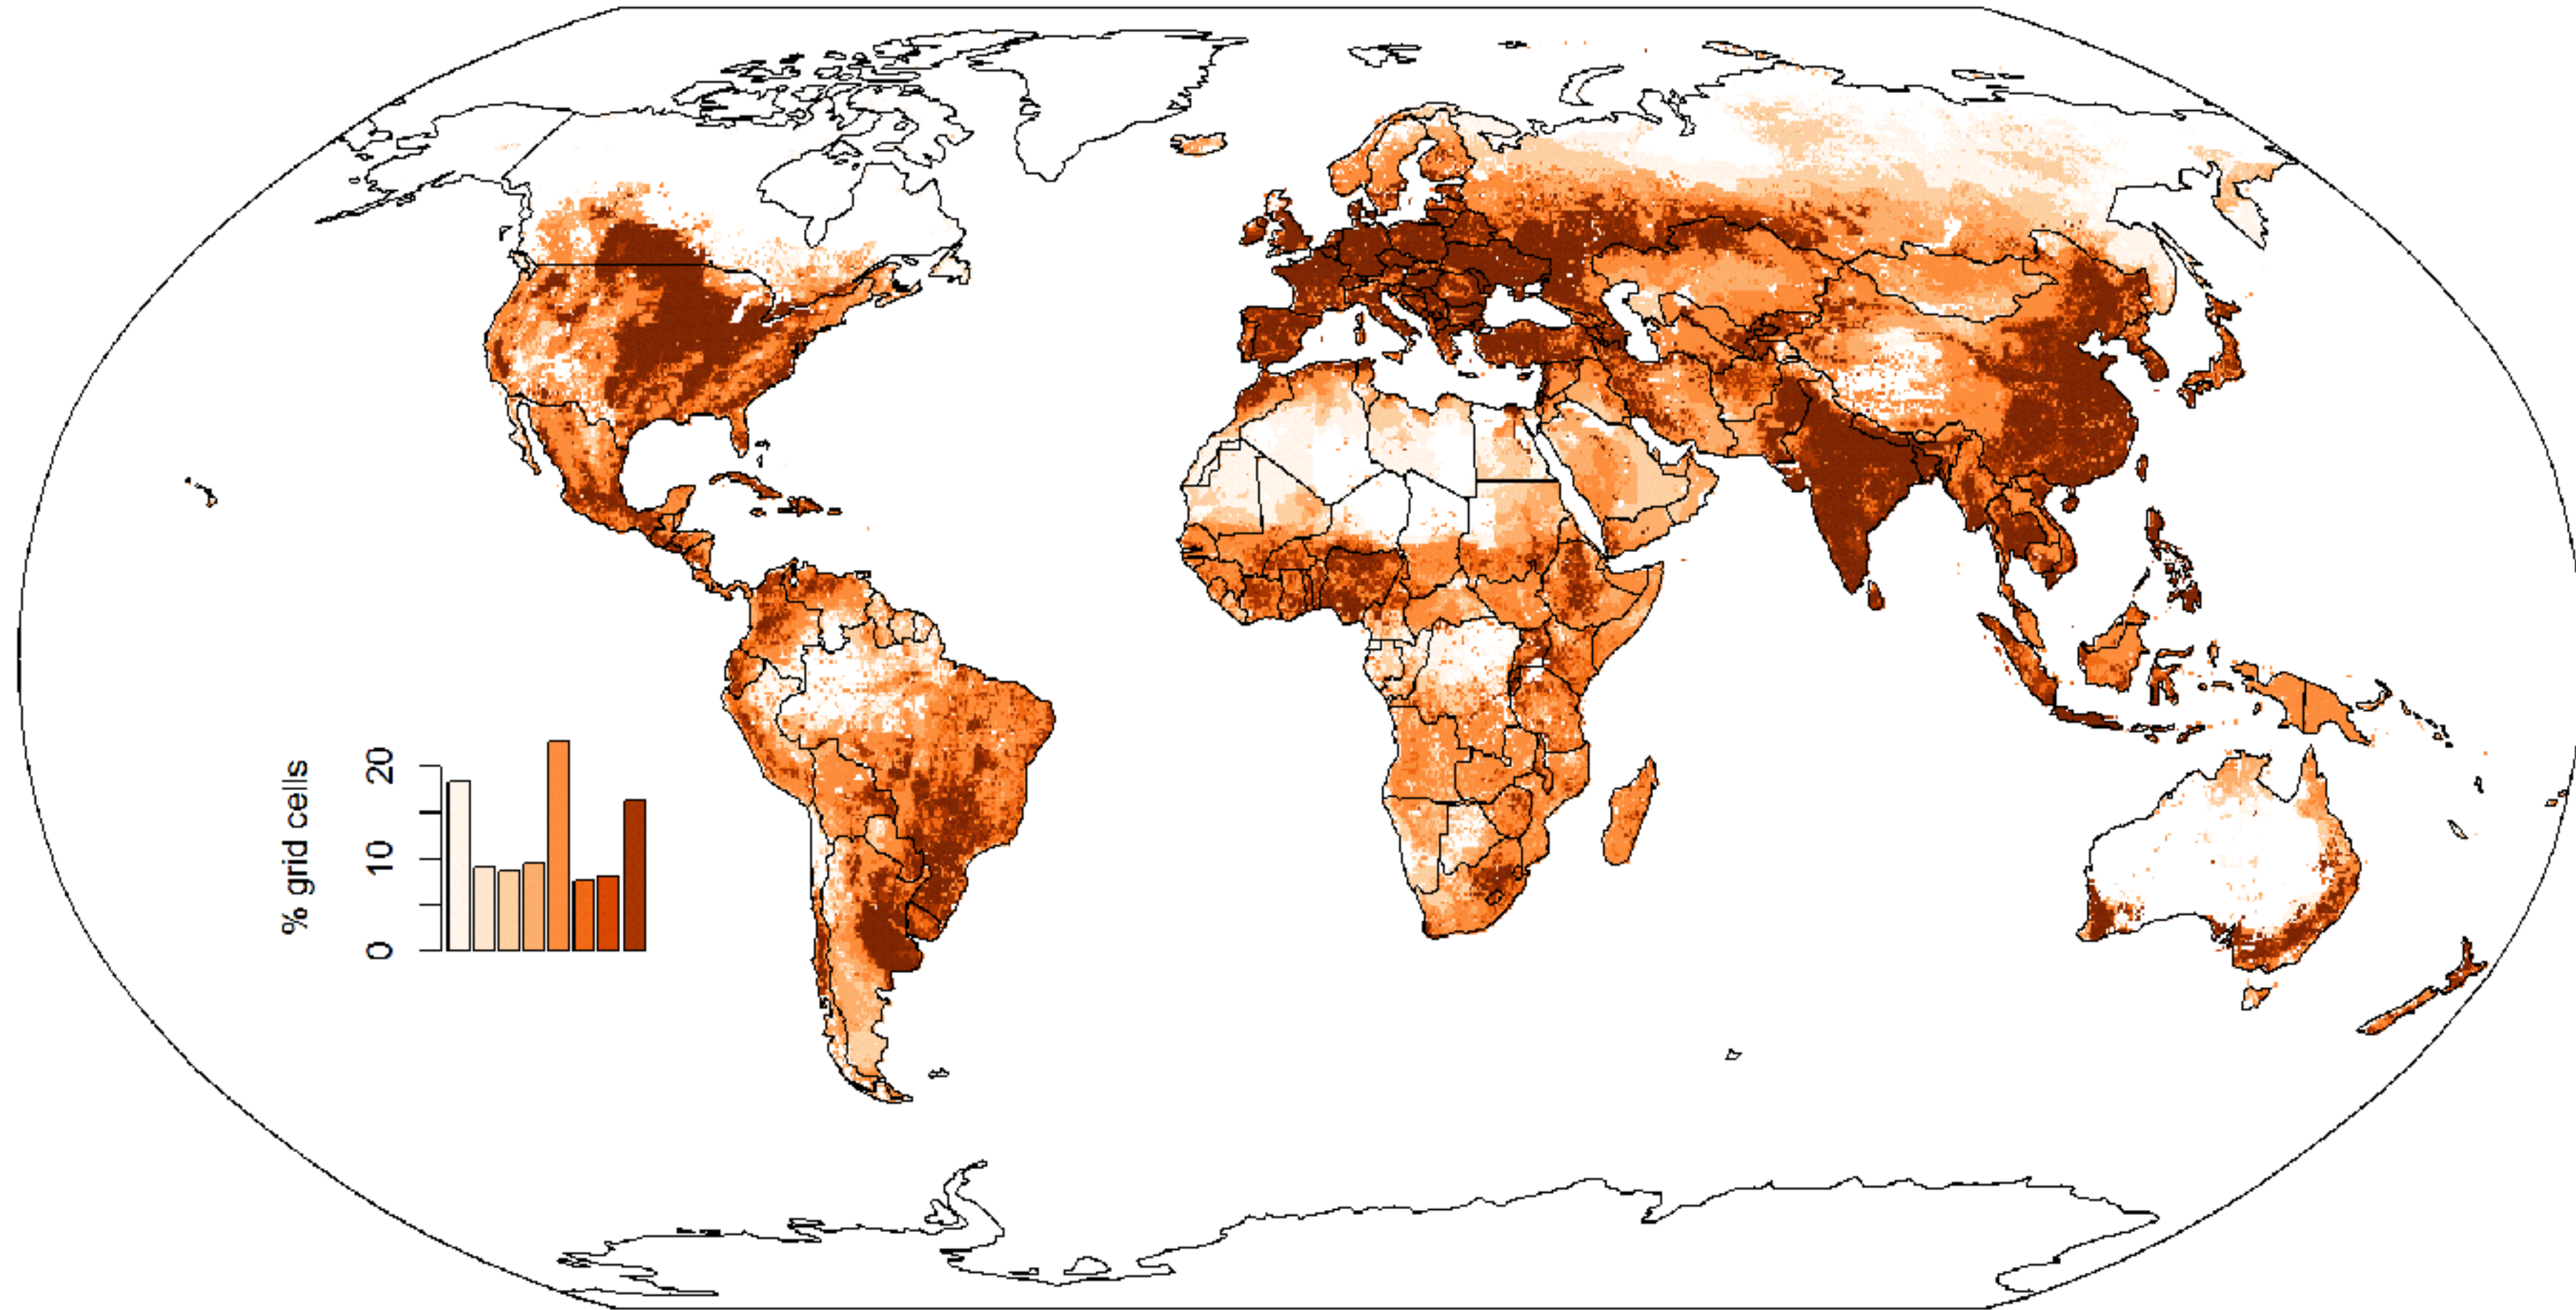

Brown Rice, 1.5 c
45% Thiamin
31% Zinc
19% Energy
15% Protein

HEALTHY FOOD =

HEALTHY PLANET

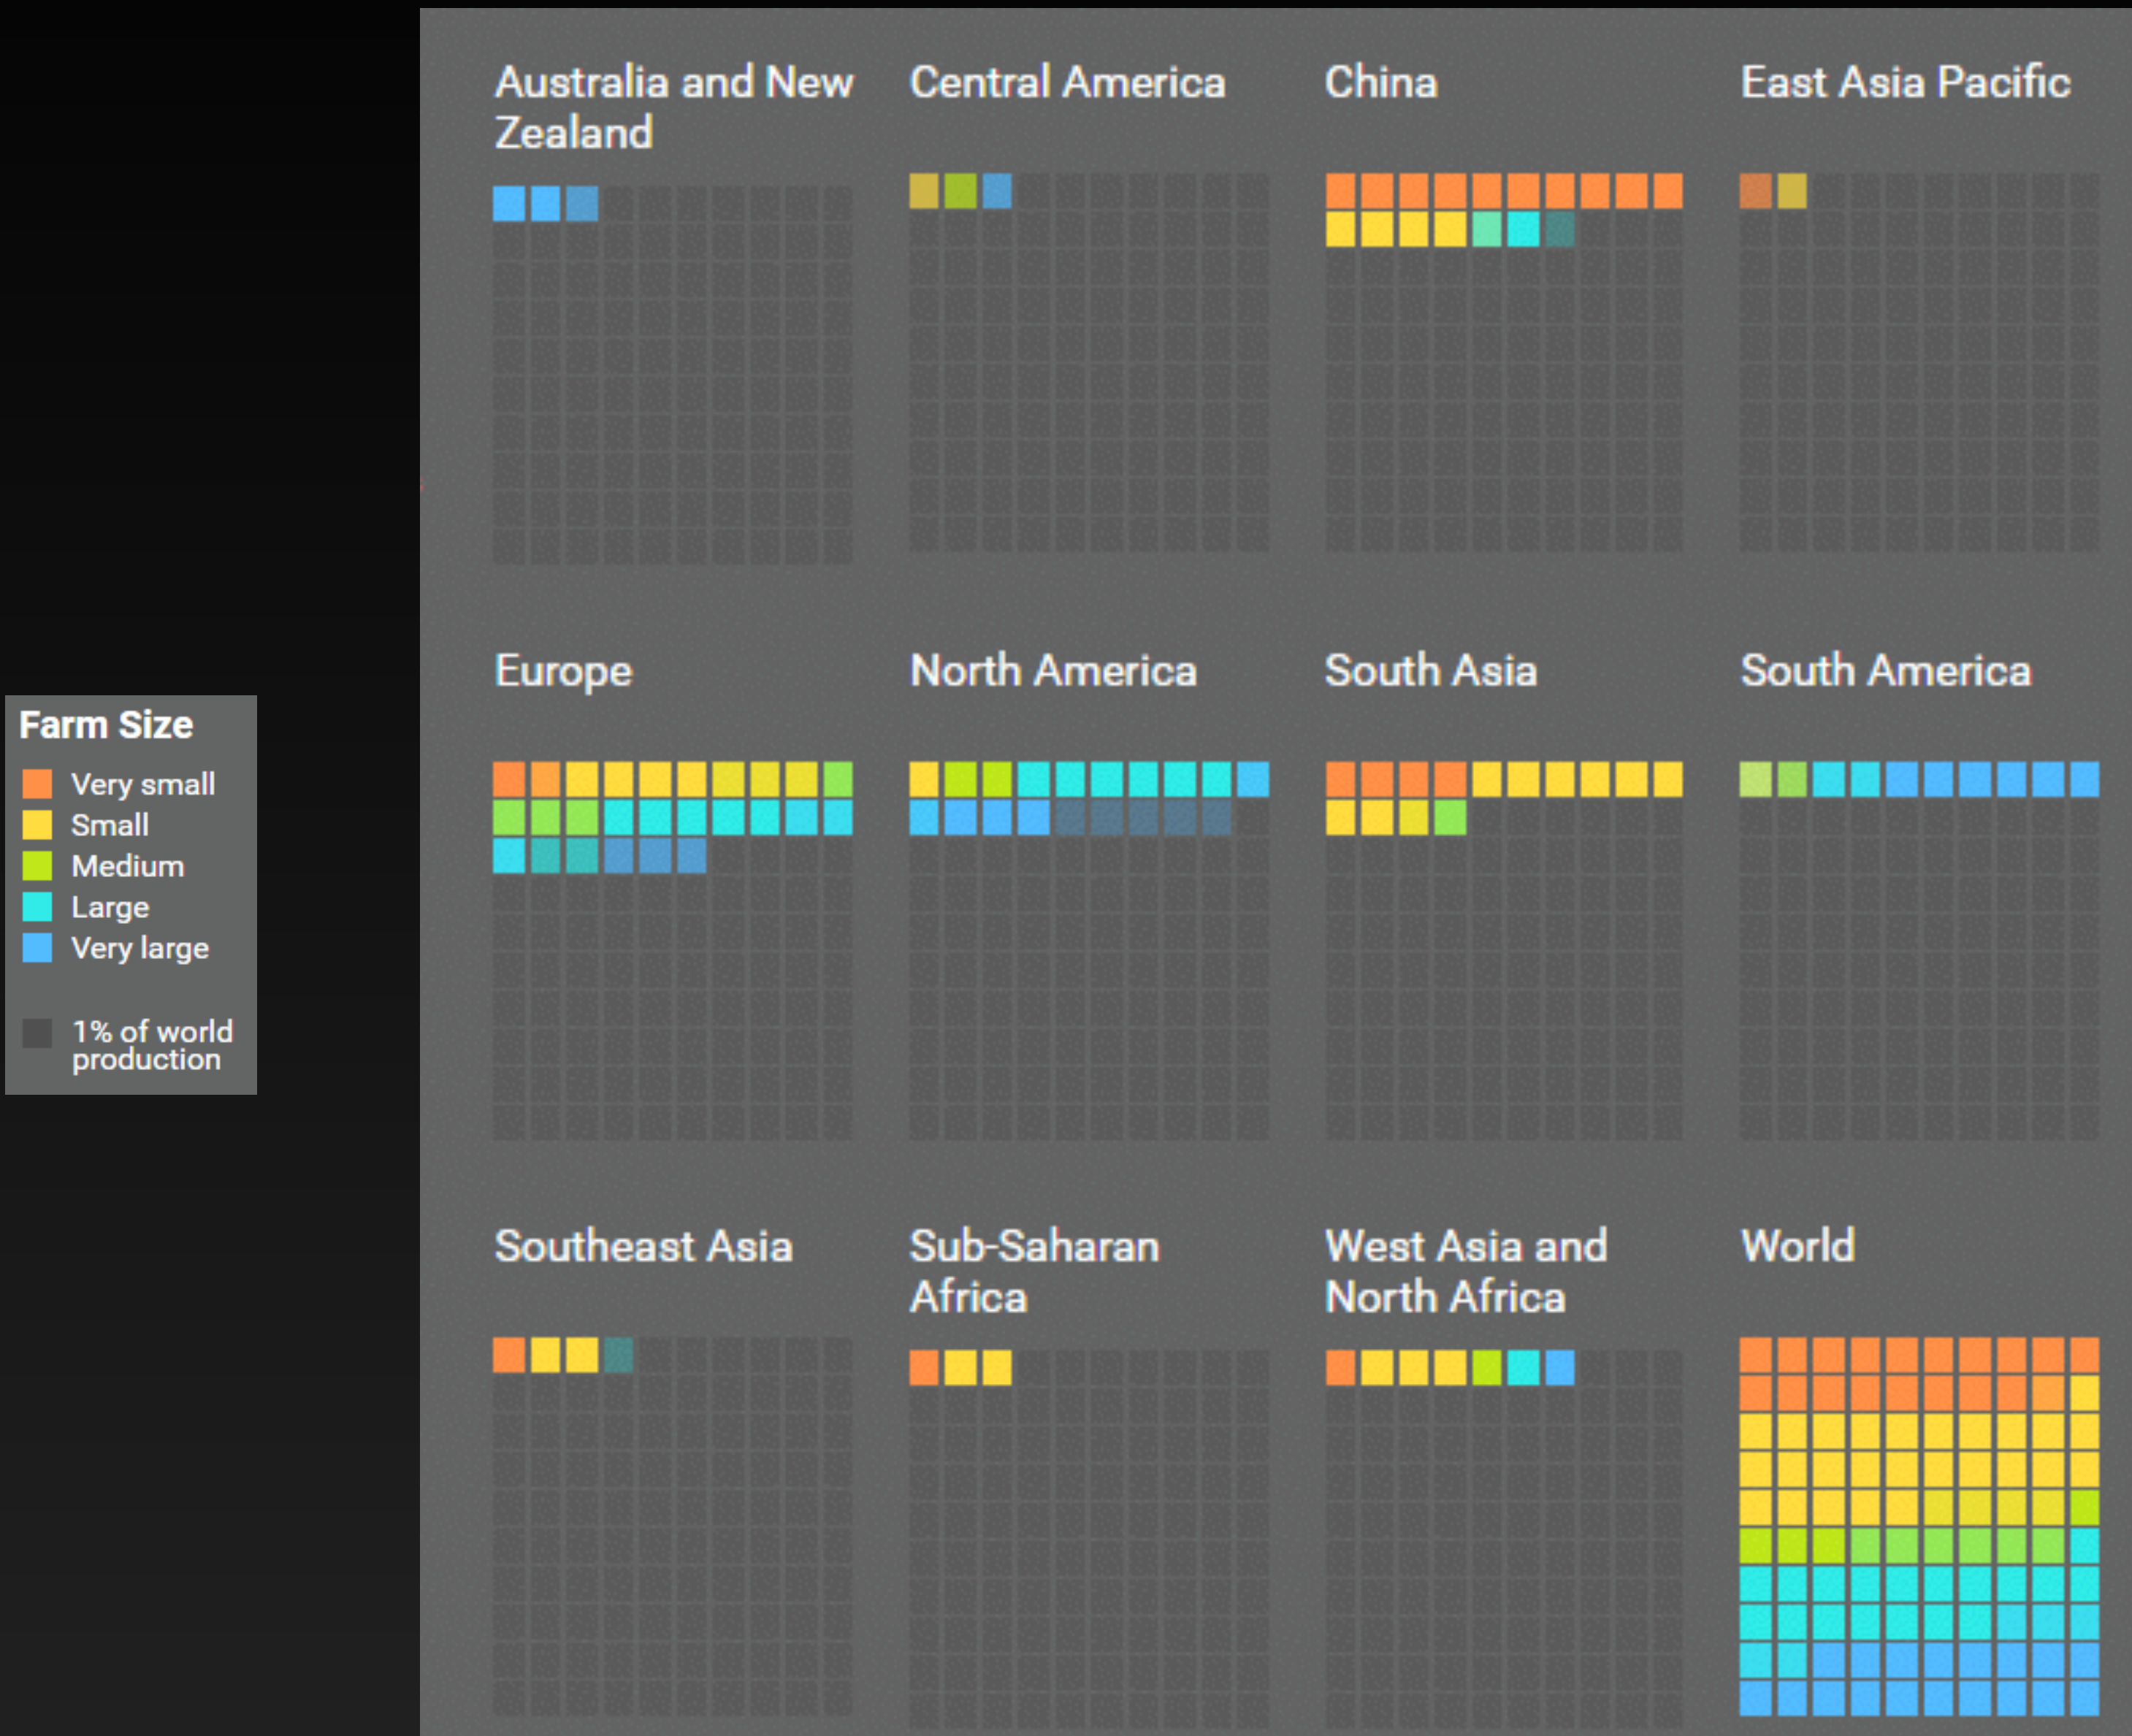

TILMAN & CLARK 2014, *NATURE*
SPRINGMANN ET AL. 2018, *NATURE*
WILLETS ET AL. 2019, *LANCET*

WHERE IS ZINC PRODUCED?

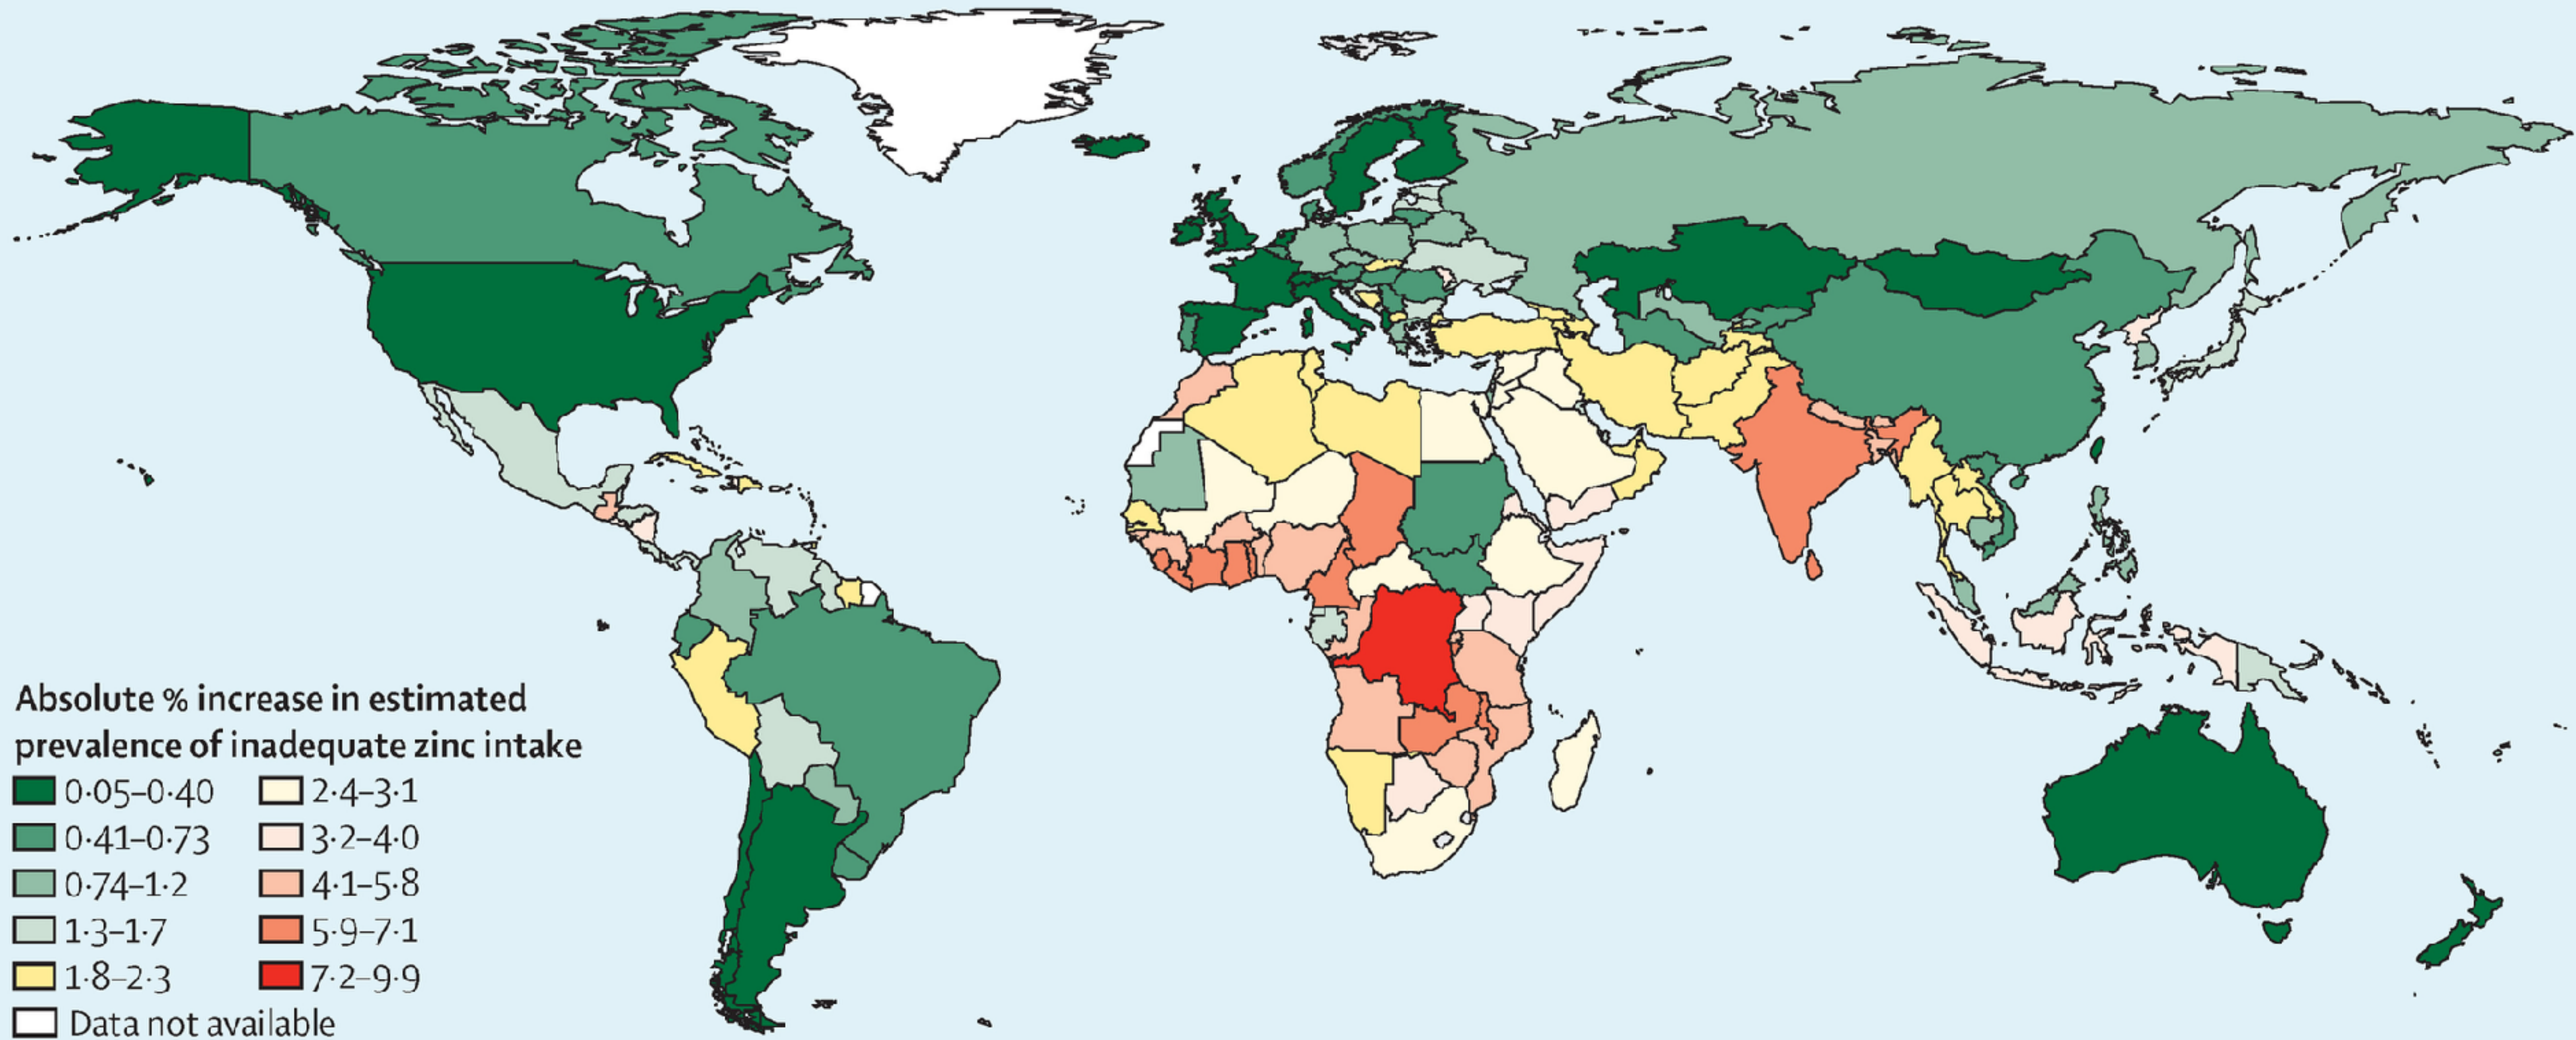

HERRERO ET AL. 2017, LANCET PLANETARY HEALTH
ENVIRONMENTREPORTS/FOODMATTERS

WHO PRODUCES WHAT?

ELEVATED CO₂ REDUCES ZINC, IRON, PROTEIN CONTENT

Minnesota

Kansas

Germany

Bolivia

Thailand

Brazil

SEEDS OF SUCCESS

PHOTO: NEIL PALMER / CIAT
CREATIVE COMMONS V2.0, 2009

PRECISION FARMING

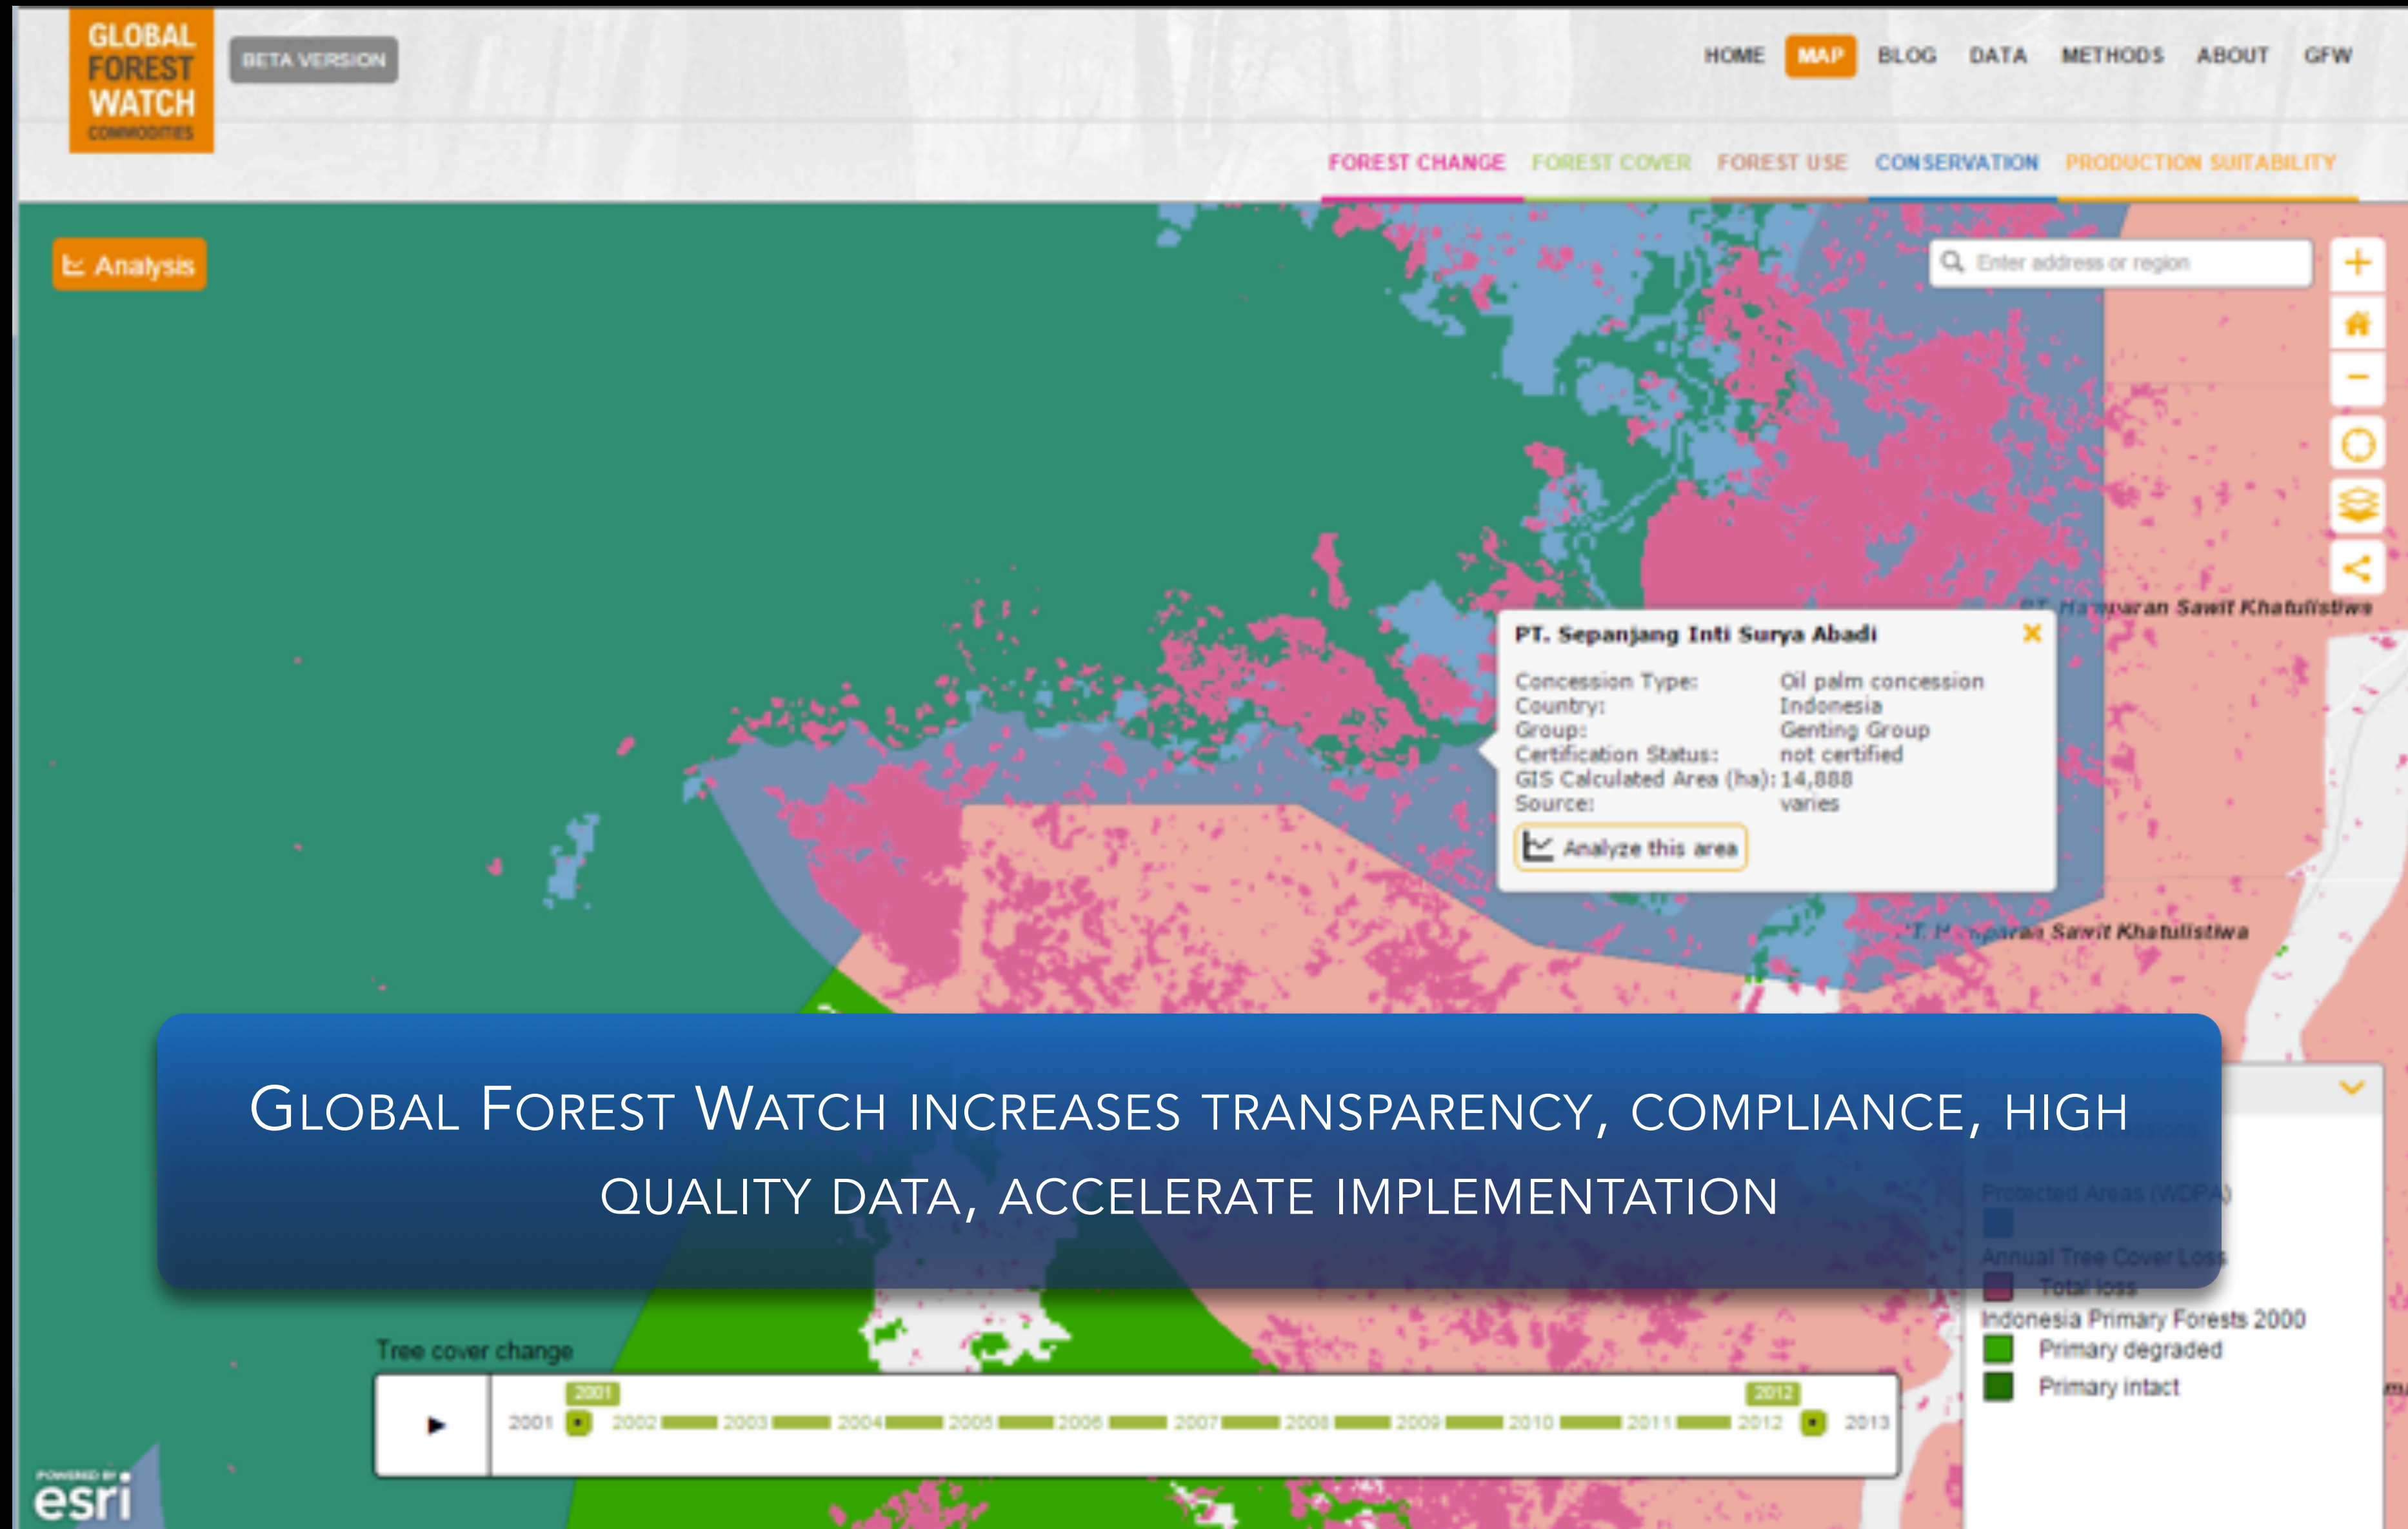

PROMOTING COVER CROPS, CONSERVATION TILLAGE, & NUTRIENT MANAGEMENT
HIGHER YIELDS IN DROUGHT & GOOD WEATHER

ZERO DEFORESTATION COMMITMENTS: OIL PALM

MONITORING EFFECTIVENESS

GLOBAL FOREST WATCH INCREASES TRANSPARENCY, COMPLIANCE, HIGH QUALITY DATA, ACCELERATE IMPLEMENTATION

CLIMATE ADAPTATION: KENYA

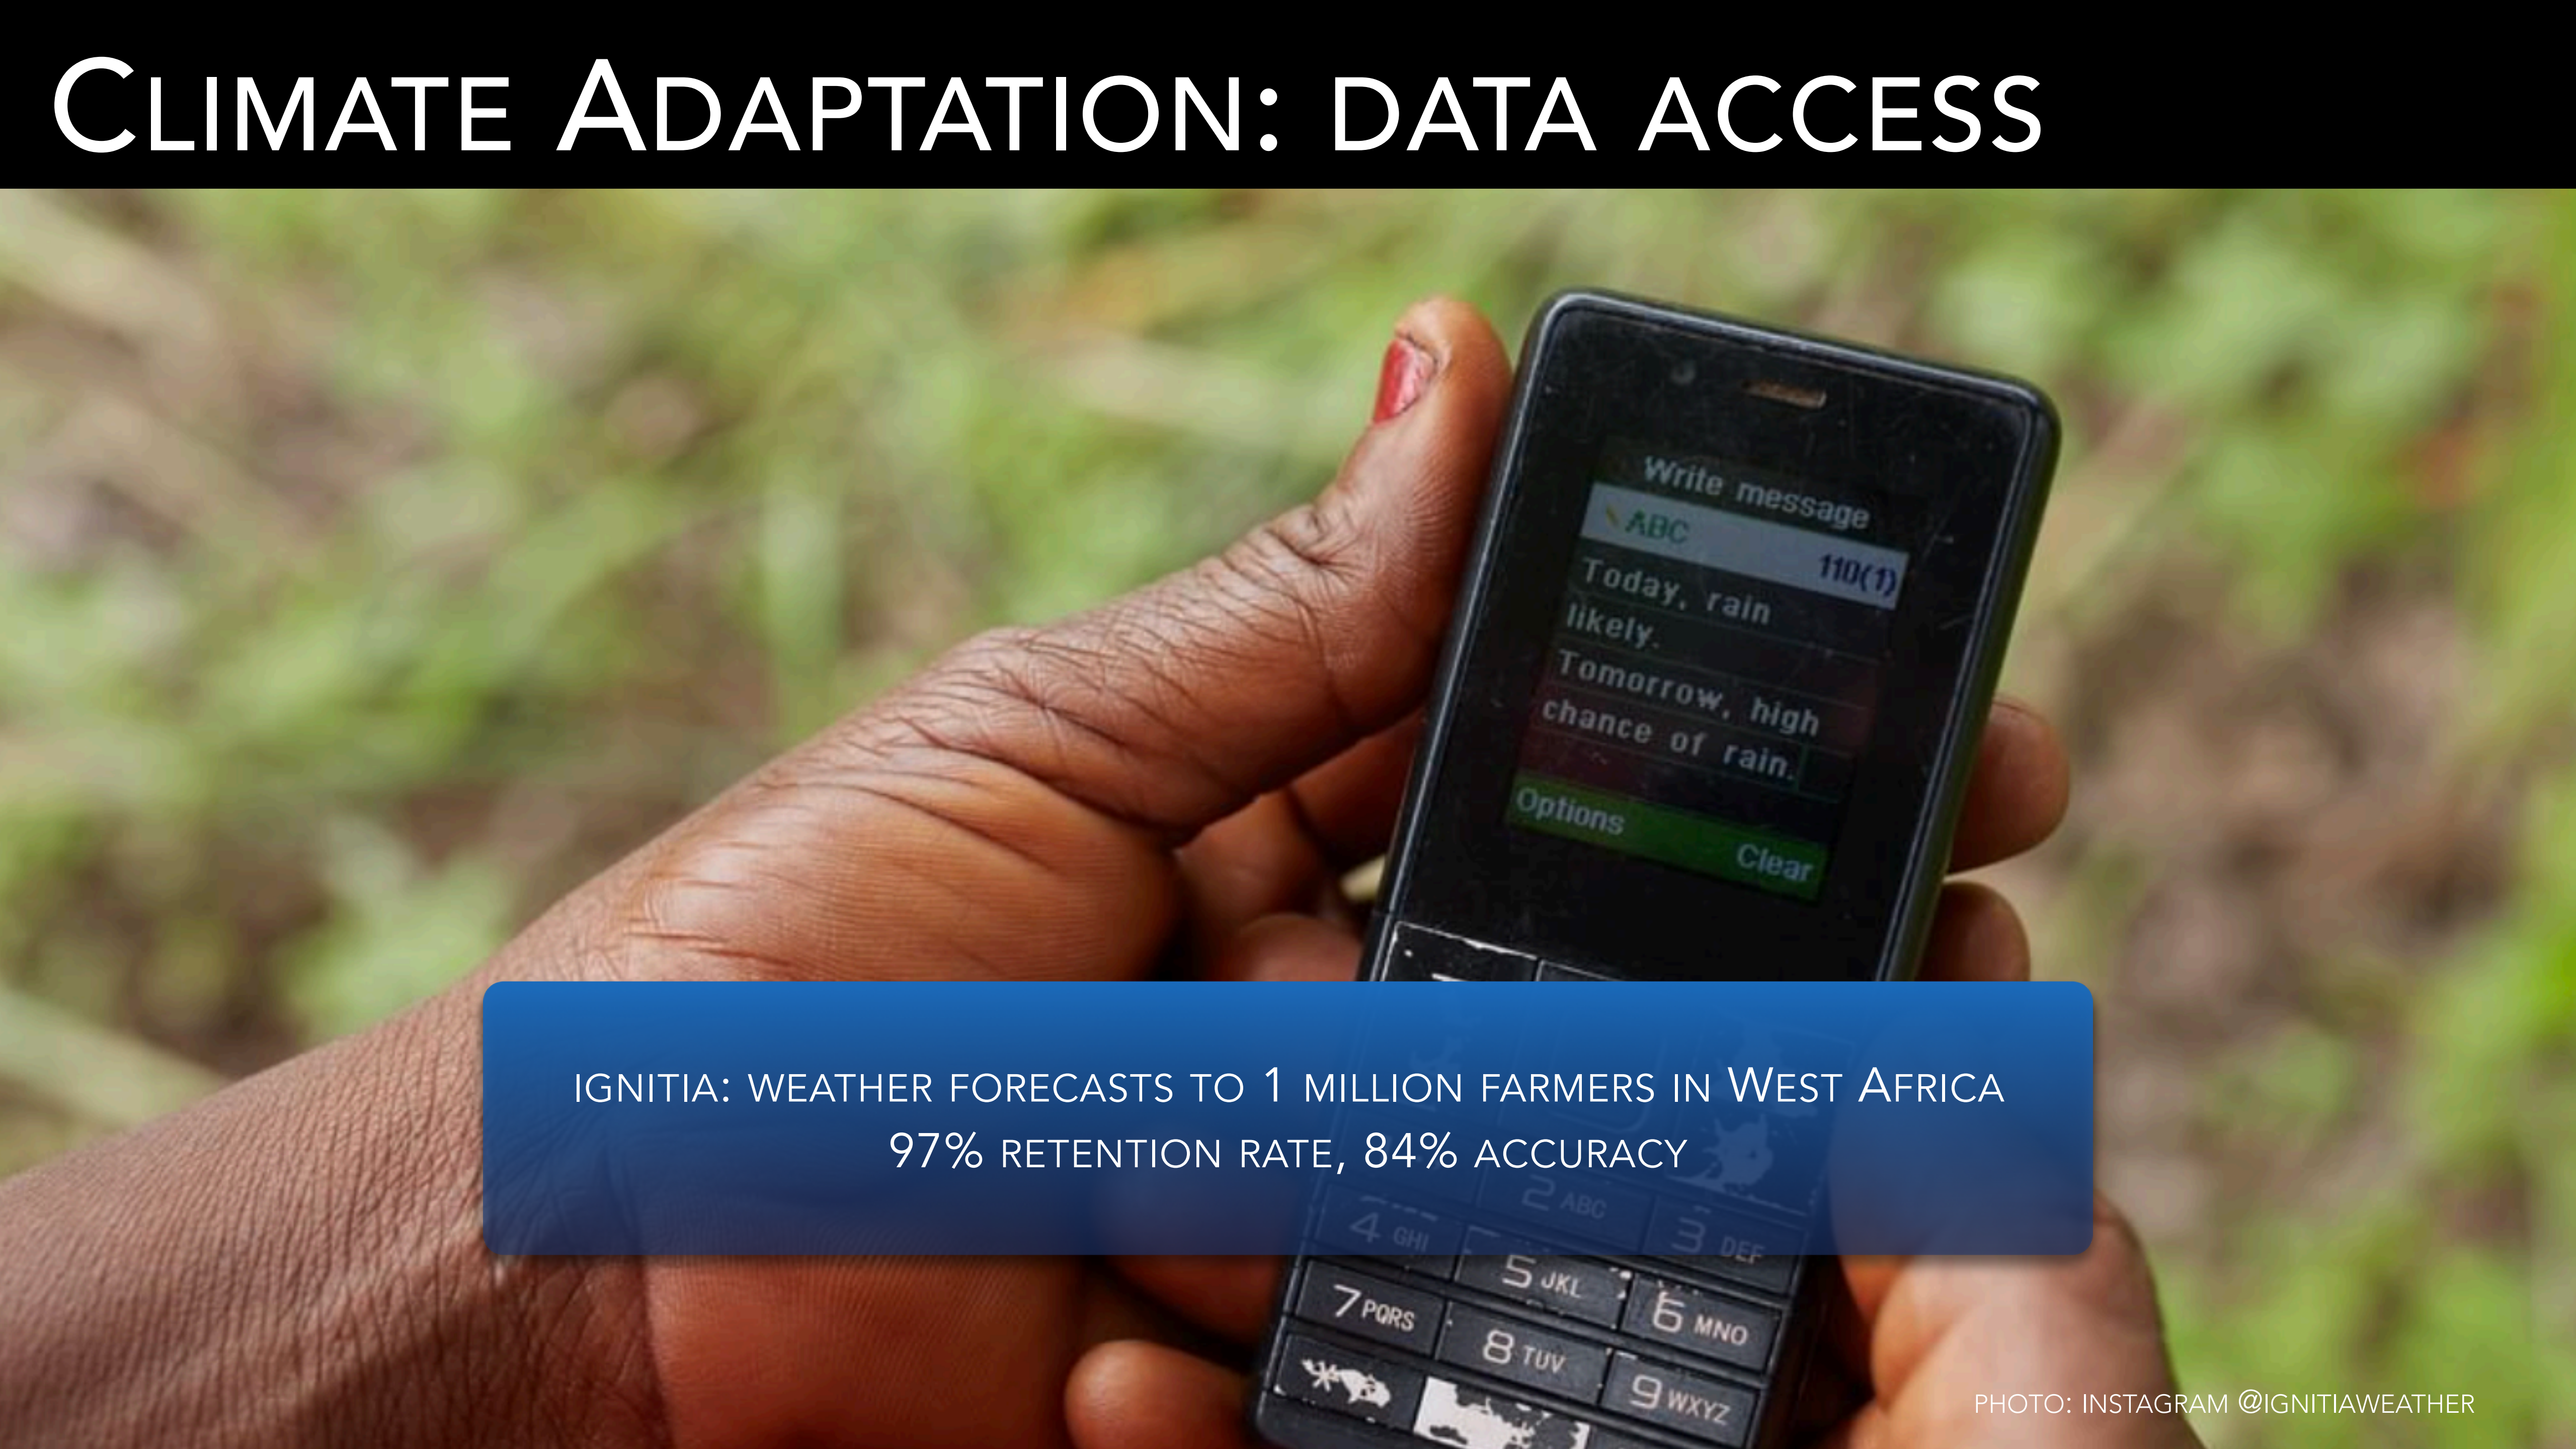

INCREASING YIELDS / REDUCING LOSS THROUGH INVESTING
DROUGHT TOLERANT, FAST MATURING VARIETIES,
SOIL HEALTH, & KNOWLEDGE NETWORKS

EMPOWERING SMALLHOLDERS: ONE ACRE FUND

A photograph of a woman in a red shirt and blue headscarf with a colorful pattern, smiling and holding a wooden staff. She is standing in a lush green cornfield. The background is filled with tall corn plants and their leaves.

ACCESS TO CREDIT, SEEDS, FERTILIZER, & KNOWLEDGE
615,000+ FARMING FAMILIES SERVED, ~65% GAIN IN FARMER INCOME

CLIMATE ADAPTATION: DATA ACCESS

A close-up photograph of a person's hand holding a black mobile phone. The phone's screen displays a text message with weather information. The message text is: "Write message", "ABC 110(1)", "Today, rain likely.", "Tomorrow, high chance of rain.", and "Options Clear". The background is a blurred green field.

Write message
ABC 110(1)
Today, rain likely.
Tomorrow, high chance of rain.
Options Clear

IGNITIA: WEATHER FORECASTS TO 1 MILLION FARMERS IN WEST AFRICA
97% RETENTION RATE, 84% ACCURACY

CLIMATE ADAPTATION: INDIA

DIRECT SEEDING, MODIFIED RICE INTENSIFICATION, WETTING/DRYING =
HIGHER YIELDS, REDUCED LABOR, 40% WATER SAVINGS

RAPID ADOPTION: DURING 2012 DROUGHT, DIRECT SEEDING
INCREASED FROM 200HA TO 35,000HAS
